Security Health Plan continuous glucose monitoring (CGM) update

Security Health Plan may add prior authorization criteria for certain drugs or products during the year. Your patients may not be using these products, but we want to provide you with these updates so that you know about future changes.

Security Health Plan recognizes the benefits of continuous glucose monitors (CGM) in treating diabetic patients. However, due to increasing utilization in non-diabetic patients and the significant cost of these products, CGM will be subject to prior authorization criteria to assess for appropriate use starting Jan. 1, 2024. Prior authorization criteria will only be applied to new starts on these products. Those members who have had a prescription for CGM filled in the last six months will be allowed to continue receiving those products.

Dexcom products (including Dexcom G6 and G7) will be the preferred CGM for commercial and exchange lines of business. Freestyle Libre and Dexcom products will both remain preferred products for Medicare Advantage members.
