Security Health Plan adds Cotiviti to enhance claim edit efficiency

In quarter four of this year, Security Health Plan will collaborate with Cotiviti as a second pass editing vendor to apply additional enhancements to the current claims editing systems. The new partnership will feature an automated front end adjudication of claims edits. These additional edits will validate correct coding guidelines as documented in CPT, HCPCS Level II, and ICD- 9 and 10. The new Cotiviti partnership will also provide greater focus on identifying incorrect or inappropriate duplicative service billing by multiple providers for the same patient on the same day.

Security Health Plan currently utilizes the Optum Claims Edit System (CES) editing solution to administer reimbursement policy and claim edit rules.
