Security Health Plan to use InterQual 2023 guidelines

Effective May 1, 2023, Security Health Plan will begin to use the InterQual 2023 version for inpatient clinical reviews and procedures. All inpatient stays require authorization. Some procedures also require prior authorization. To see a list of procedures that require prior authorizations, please visit the Prior Authorization section on the Security Health Plan website. Security uses InterQual criteria as a screening tool to determine if the services are clinically indicated, and if services are provided in the appropriate level of care. InterQual clinical criteria is based on the principles of evidence-based medicine. The change will impact all of Security's plans including BadgerCare Plus, individual and family, employer, Medicare and Security Administrative Services.
