BOMA Georgia

# Maintaining Indoor Air Quality Webinar

SEPT. 10, 2020 | 1:00-2:00 PM ET

Sponsored by Parker Young Construction/FireStar, Inc.

With buildings increasing in utilization, tenants may question if indoor environments can provide some measure of protection from COVID-19 exposure and airborne diseases. In this webinar, Bill Palmer and Bob Wilson with the National Air Filtration Association will give a deep dive into indoor air quality and how to create safeguards for your facility. Palmer and Wilson will explain how to plan environmental improvements, discuss the benefits and differences between air filtration and germicidal UV irradiation and give an overview of the importance of indoor air quality.

Palmer and Wilson each have almost 40 years in the air filtration industry and have helped create the best practices for the air filtration industry. They will help property professionals understand their key objectives when it comes to indoor air quality and offer tips to help in the reduction of airborne transmission of viruses. They will offer potential solutions that are to the mutual benefit of tenants and property/facility managers and building engineers.
