

PURIFYGLOBAL

PURIFY GLOBAL offers high level disinfection services, specializing in end-use fogging application on various types of surfaces for advanced decontamination. Our services ensure thorough disinfection for both high-contact and low-contact areas, effectively prevents recontamination, and sets to improve the quality of life for employees, patients, and the general population.

ABOUT OUR GOALS:

Our CEO Matthew Moreno wanted to help solve some problems that businesses and individuals are facing during this terrible time. Simply put we wanted to offer commercial disinfecting services with world class: people, training, process, equipment and chemicals. In doing this we can do our part to help slow the spread. In closing our thought is that if we can help save even one life, then our business will be an enormous success. If can help keep hundreds or even thousands from getting this awful virus that would be even better!

We look forward to serving you.

MATHEW MORENO
CEO - PURIFY GLOBAL

ABOUT OUR PROCESS:

We can guarantee that we are only sending in trained professionals to do the service and that our process is safe, effective and efficient.

First, we fog and disinfect high touch points of the exterior of the building. Once inside, we begin the disinfection process using our ULV (ultra low volume) Foggers. We concentrate on high-contact surfaces like doorknobs, elevator buttons, keyboards and tables. We then make sure all other areas and hard to reach surfaces are disinfected.

**HIGH-END
PPE**

ABOUT OUR EQUIPMENT:

We will be using a mobile fogging unit to create and disperse a disinfectant aerosol to reduce the numbers of airborne microorganisms and also to apply disinfectant to surfaces that may be difficult to reach. These are the machines that we will be using for your building.

**HIGH-END
ULV FOGGERS**

ABOUT OUR CHEMICALS

We can guarantee that our disinfectants are EPA-approved and in accordance with the CDC guidelines. We are using a natural cleaner that is effective in eliminating various harmful pathogens and viruses such as H1N1 and coronavirus. It is administered by trained professionals and is non-toxic and safe to use.

Our disinfectant solution is effective for all surfaces including metal, wood, glass, tile and even fabric without any damage.

**CDC LISTED
EPA APPROVED

TOWNE

BRITANNY JENCIK, MOTHER OF 21 CHILDREN, WHERE 17 PEOPLE GOT INFECTED BY COVID-19.

"We didn't feel like even with extremely thorough cleaning we could hit all the extremes. The other piece to that was peace of mind."
