

Immune-Avatar humanized models For IO *in vivo* studies

WuXi AppTec Research Service Division, Oncology & Immunology Unit

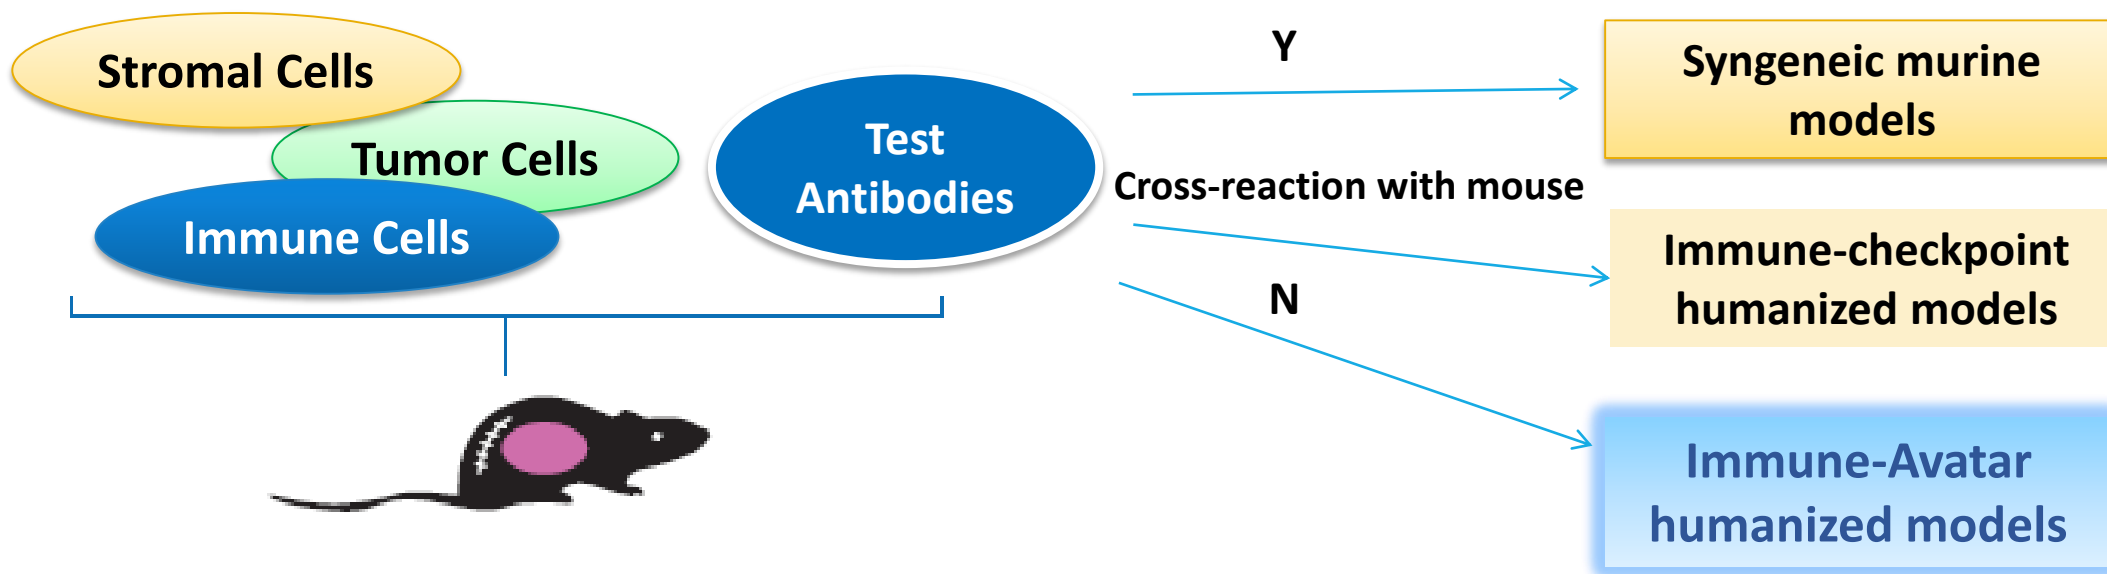

2020.01

Outline

- WuXi in vivo models in Immuno-Oncology
- WuXi immune-avatar humanized models
 - WuXi PBMC humanized models
 - WuXi hHSC humanized models
- Next generation humanized models

Background

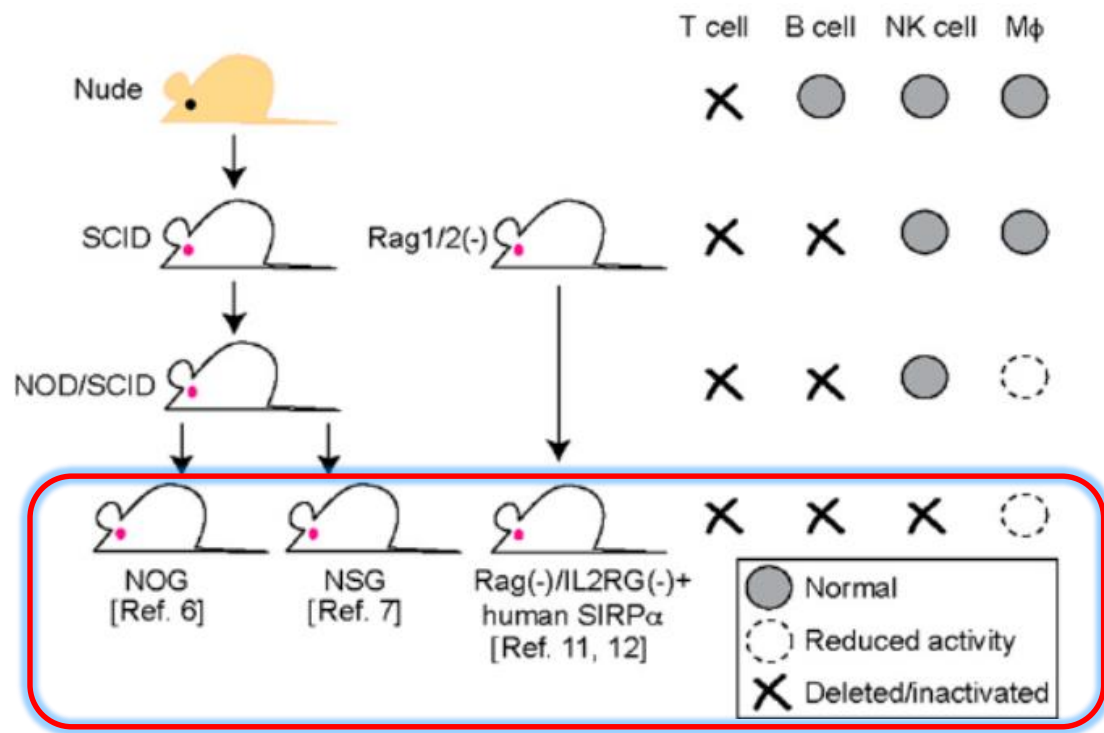

What are we looking for?

Mouse models harboring human tumor and immune cells to study efficacy and MoA of humanized/fully human antibodies

Immune-Avatar humanized models

Severe immunodeficient mice engrafted with human immune cells (HSCs or PBMCs) and bearing human tumor xenografts

Background

The “NOD SCID Gamma” background recipient mouse has been shown to support greater engraftment of human immune cells (Goyama, Blood 2015)

hPBMC model

- T cell focused studies, quick and flexible
- 1 wk for re-constitution/3-5 wks of dosing & observation window
- 2 systems for different study purpose
- Combine with WuXi PDX/CDX models

hHSC model

- Multiple lineage re-constitution
- 4-8 months lead time
- Combine with WuXi PDX/CDX models

WuXi PBMC humanized models

Two PBMC delivery systems: i.v. injection or co-inoculation with tumor

Systemic delivery PBMC (Systemic model)

- **More relevant:** circulation T cells infiltrating in tumors
- Only **3-4 arms** per study (single donor)
- Earlier GvHD

- **Translational Research**
- **Drug/Candidate efficacy**

co-inoculation of PBMC with Tumor cells (co-inoculation model)

- **More straight forward:** direct contact between effect cells and target cells
- **8-12 arms** per study (single donor)
- Delayed GvHD
- Multiple injection feasible

- **MoA study**
- **Lead screening & Optimization**

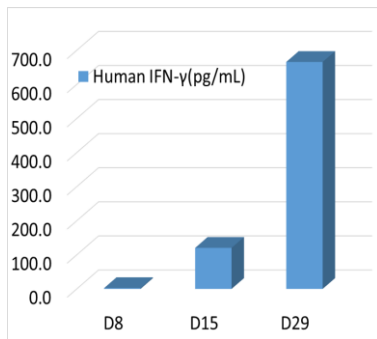

Criteria

QC: Immune reconstitution
Donor: single donor for 1 study, HLA typing (optional)
Leading time: 2-3 months

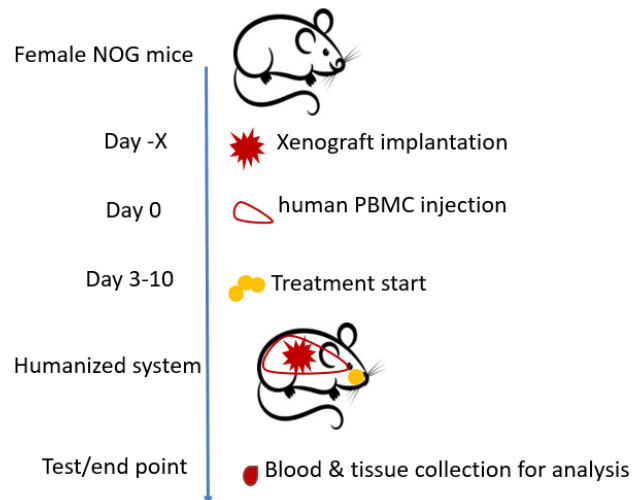

Feasible conditions

Immune cells: PBMC/T cells
Precondition: *in vitro* activation/ co-culture with target cells
Injection: IP/IV/SC; single/multiple injection

Successful human lymphocyte engraftment

Mouse trial of PD-1 antibodies in hPBMC-PDX models

TGI of Opdivo treatment

Correlation between TGI and TIL%

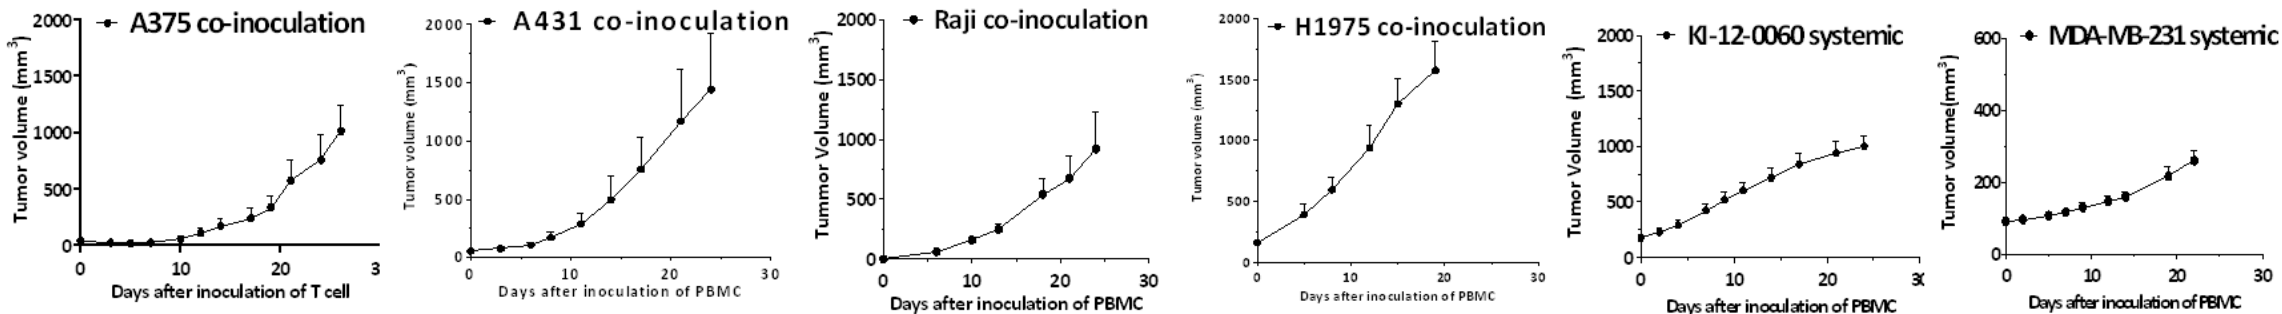

Correlation between TGI and PD-L1 expression

- Only 30% IO-xenograft models can benefit from nivolumab treatment
- Good correlation have been observed
 - a) between tumor lymphocyte infiltration (human-reconstituted) and efficacy of nivolumab
 - b) between PD-L1 expression and efficacy of nivolumab

Growth curve of 6 xenografts on PBMC humanized models

Tumor infiltrating leukocytes in 6 xenograft on PBMC humanized models

Reproducibility of drug response

Raji co-inoculation PBMC models

Ab001

Individual tumor growth kinetics

Raji co-inoculation PBMC model

Ab002

Individual tumor infiltration lymphocytes

Ab003

hCD45+ cell/ alive cells in tumor

hCD8+ cells/hCD45+ cells

The growth curve may varies among different donors, but the response trend are consistent.

WuXi PBMC humanized models-Systemic (25)

Model ID	Cancer type	Target	Efficacy
PDX (14)			
LU-01-0737	Lung Cancer	EGFR, PD-1	Yes
LU-01-1004	Lung Cancer	EGFR, PD-1	Yes
LU-01-1013	Lung Cancer	EGFR, PD-1	Yes
LU-01-1008	Lung Cancer	EGFR, PD-1	Yes
LU-01-1017	Lung Cancer	EGFR, PD-1	Yes
LU-01-1030	Lung Cancer	EGFR, PD-1	Yes
LU-01-1033	Lung Cancer	PD-1	Yes
LU-01-1038	Lung Cancer	PD-1	Yes

U266B1	Multiple Myeloma	NY-ESO-1	Yes
A375*	Melanoma	VEGFR2	Yes
SK-OV-3	Ovarian	HER2/CD3	
HT-1080	Sarcoma	-	

WuXi Immune-avatar humanized models-HSC models

HSC humanized models introduction

In blood

2 months

Tumor Growth Curve

Tumor infiltrating lymphocytes

Human leukocytes

T helper and Cytotoxic T

6 months

Th1 and Th2

Treg

- CD8+ T cells (cytotoxic T cell) predominated in TILs
- Th1 (cellular immunity) and Treg (suppressor T cells) were detected in TILs while Th2 (humoral immunity) was not

Next generation humanized models

Design

Transgenic HLA expression or elimination of mouse H2

Reduce xeno-reactivity, delay GvHD
Increase study window of PBMC humanized models

Transgenic Human cytokine expression

Promote myeloid cell engraftment/NK cell engraftment for hHSC humanized models

OUR COMMITMENT

Improving Health. Making a Difference.
