

Webinar: AI and Global Health—Don't Be Left Behind!

Join us to learn about Artificial Intelligence (AI) in Global Health: Practical Applications, Real-World Constraints, and What It Takes to Adopt AI Well.

When? Tuesday, 26 May 2026, 09:00-10:30 AM EST

In this interactive workshop, participants will:

1. Explore how AI can be used effectively in their own work.
2. Learn what organizational adoption requires, and the key risks, limitations, and ethical considerations to keep in mind.
3. Examine how AI is currently being deployed in low- and middle-income countries, drawing on real-world examples from community health and research settings.

Speaker

Nate Miller is a global health consultant and AI educator with over 20 years of experience designing and implementing community health programs across Africa, Asia, and the Middle East with UNICEF, WHO, the World Bank, Save the Children, and Johns Hopkins University. Over the past two years, his work has focused on how AI applies to global health research and practice in real-world settings, advising organizations on practical AI adoption and conducting research on AI applications in community health worker programs.
