

Household Hazardous Waste Coordinator Training

Free Live Virtual Trainings for HHW Coordinators & Managers

Training #1: Thursday, June 20, 2024 1:00—3:00 PM (Rescheduled from June 6)

- Protection for staff and volunteers: PPE to have on hand and primary exposure route concerns (splashes, leaking containers, spills)
- Common high risk corrosive/caustic chemicals: How they can hurt (muriatic acid, pool oxidizers, naval jelly, battery acid)
- Common high risk toxins: Pesticides, water reactive rodenticides and how they can hurt (acute and chronic inhalation risks)
- The unusual stuff: High hazards that are rare, but HHW folks need to be aware of (ether, collodion, military munitions, peroxidizable solvents)

Training #2: Thursday, July 11, 2024 10:00 AM—Noon

- Vaping devices and nicotine cartridges: What do they look like, handling recommendations, what we have seen for haz waste disposal coding, what to watch out for
- Lithium batteries (majority time spent on this!): Why are they dangerous, what to watch out for, how to manage leaking/damaged/smoking/hot ones, best options for disposal at this time, options for fire prevention and response, and where you might find them.
- PFAS in common household products: An emerging concern and how to manage.

Trainer: ABOUT BECKY

Becky Wehrman-Andersen, MEd is pleased to present these training sessions. She is an environmental and safety compliance leader with 20+ years of corporate, academic, and governmental experience in chemistry safety, regulatory compliance, hazardous waste management, emergency response, professional training, EPA negotiations, and chemical risk minimization. Becky led a school chemical cleanout program in Iowa and has conducted more than 350 cleanouts at high schools, community colleges and universities. She is the owner and senior consultant for Hazardous Materials Consulting, Inc. providing regulatory assistance to school, industry, and government.

Becky has trained hundreds of administrators, teachers and facility personnel in school chemical safety and those efforts resulted in the disposal of more than 400,000 pounds of unwanted, toxic, flammable, unstable, highly regulated, hazardous chemicals across the country. She is well versed in EPA hazardous waste regulations and the unique challenges schools face. She is a North American Hazardous Materials Managers (NAHMMA) and Solid Waste Association of North America (SWANA) certified trainer, received the Iowa Governor's Environmental Excellence program award, and honorable mention from EPA's Pollution Prevention for her school chemical safety efforts.
