

SMM Tours Show Successful Initiatives

This past September, the Syracuse University Center for Sustainable Community Solutions (SU-CSCS), with the support of NYSAR³, facilitated two day-long tours of sustainable materials management (SMM) facilities -- one in the Hudson Valley and the other on Long Island – with the goal of featuring successful initiatives, drawing attention to pressing challenges, and brainstorming regional opportunities.

The tour groups consisted of recycling coordinators, sustainability specialists, environmental consultants, and other waste reduction professionals. The facilities that were featured included compost sites, recycling and reuse centers, restores, and food banks/pantries. For more information about this tour series, please contact SU-CSCS program coordinator, Jesse Kerns, at jekerns@syrr.edu or 315-443-8488.
