

Microchip Cleanroom Training

at UCSB PaCE

Our hands-on training is designed for new entrants into the semiconductor field

- **Cleanroom Technician (40 hours)**

This course offers lectures and extensive hands-on experience within the CNSI cleanroom on the UCSB campus. Students will process two semiconductor wafers using standard microchip fabrication processes. This training is designed for individuals wanting to enter the field of microchip processing and/or improve their current skills. After completion, students will be offered introductions to local employers seeking to hire individuals with skills taught in this course.

Notes:

- High School Diploma/GED completion required
- Scholarships may be available
