

FOR IMMEDIATE RELEASE

Ultralight Camera Systems Unveils New Color Options for Underwater and Cinema Camera Accessories

Oxnard, CA, April 16, 2024 – Ultralight Camera Systems (ULCS), a leader in underwater imaging technology, is thrilled to announce an expansion of its product line to include a vibrant selection of colored camera accessories, designed for enthusiasts and professionals alike who wish to personalize their equipment for both underwater and cinema applications.

Understanding the individuality of each diver and filmmaker, ULCS has introduced an array of color options for its high-quality aluminum accessories. From ball adaptors to knobs, the new color range is set to add a personal touch to photography and videography gear, catering to the unique style of each user. The coloring process involves Type II anodizing for the colored parts, ensuring durability while offering a splash of personality. Although not as hard as the Type III anodizing used for black accessories, the colored options maintain the quality and reliability that ULCS is known for.

Ken Kollwitz, owner of Ultralight Camera Solutions and a diving enthusiast for over thirty years, emphasized the importance of providing options that reflect the individuality of each customer. "We believe in pushing the boundaries of underwater imaging technology while also offering our customers the freedom to express themselves through our products," said Schuller.

All ULCS products are made in the USA and come with a lifetime warranty, underscoring the company's commitment to quality and customer satisfaction.

For more information on the new color options and the entire ULCS product range, visit ulcs.com.
