

FOR IMMEDIATE RELEASE

ULCS Unveils Innovative Underwater Camera Sled Tray Kits and Accessories, garnering International Approval from professional underwater photographers across the globe.

Oxnard, CA: March 19, 2024 - ULCS, a leader in underwater photography equipment, is proud to announce the release of its latest innovation, the Underwater Camera Sled Tray Kits, along with a few yet-to-be-released camera sled products. These cutting-edge products have already gained significant acclaim from ambassadors and professional photographers across the globe.

Designed to revolutionize underwater photography, the ULCS Underwater Camera Sled

Tray Kits offer unparalleled functionality and versatility and are compatible with all camera models. The sled kits revolve around the user-friendly Tri-Tray, which obtains stability from using two side rails and four heavy-duty brackets that can be adjusted effortlessly.

The ULCS team has also been hard at work developing a sliding weight system that mounts to the two side rails. This system allows the sled to be perfectly balanced, enhancing the user experience and instantly capturing stunning underwater shots. In addition to the side rails and heavy-duty brackets, there are numerous attachment points for other accessories, letting the user custom-tailor their sled for their specific use.

One of the standout features of ULCS's latest offering is its versatility on land and sea. Users can confidently place the system on a boat, knowing that the dome is fully protected, while still enjoying its full functionality and ease of use. "We are thrilled to introduce our latest line of underwater photography equipment," said Ken Kollwitz, owner at ULCS. "Our team has worked tirelessly to develop products that not only meet but exceed the expectations of our customers. The positive feedback from our Brand Ambassadors and customers reinforces our commitment to innovation and quality."

In addition to the Underwater Camera Sled Tray Kits, ULCS introduced a Monitor Bracket Kit that has been newly updated. The monitor bracket kit allows users to bolt the bracket directly under the camera tray. It includes a ball mount and a special knob enabling users to adjust the monitor conveniently with a clamp, ensuring optimal visibility while underwater. In addition to the lineup of sled accessories are two new products yet to be introduced. The first is the SB-04-BCK, a small single-ball arm customized to work in conjunction with a long double cutout clamp, letting the user easily mount to large buoyancy floats side by side above the camera. The second new product yet to be introduced is the sliding weight kit. The weight kit includes all hardware and 1 lb. of stainless steel weights that can be made to slide back and forth in the rail slots with the use of a special t-nut or the weights can be bolted almost anywhere the user requires.

For a closer look at the ULCS Underwater Camera Sled Tray Kits, weight kit, SB-04 Arm, and the sled in action, viewers are encouraged to watch the YouTube video at <https://www.youtube.com/watch?v=MPdrC1iWXd4&t=22s>.
