FOR IMMEDIATE RELEASE

ULCS Launches Two New Accessories Built for Faster, More Flexible Camera Setups

New Monitor Ball Mount and Quick-Release Adapter Give Cinema and Underwater Professionals Greater Control in the Field

---

Oxnard, California – July 7, 2026 – Ultralight Camera Solutions (ULCS) has released two new camera accessories designed to help photographers, videographers, and cinematographers create more adaptable, reliable, and efficient setups: the BA-UC-14 Universal Cinema Monitor Ball Mount and the AC-AQD04 4-Inch Quick-Release Adapter.

These new products demonstrate ULCS's ongoing commitment to developing modular, easy-to-maintain equipment for real-world shooting situations, from underwater photography to professional cinema productions.

"Cinematographers kept asking us for a single mount that worked reliably across different monitor brands without needing to swap hardware between setups," says Ken Kollwitz, owner of ULCS. "We built the BA-UC-14 to solve that problem directly. Both of these new accessories give professionals more flexibility without adding unnecessary complexity to their rigs."

BA-UC-14 Universal Cinema Monitor Ball Mount

The Ultralight BA-UC-14 Universal Cinema Monitor Ball Mount is made for use with newer Atomos, SmallHD, Blackmagic, and Accsoon monitors and cages. The mount offers a dependable, adjustable mounting point for on-camera monitors and accessories, integrating with standard 1-inch ball and clamp systems for easy movement and strong locking. Its universal design makes it compatible with many modern cinema monitor cages, letting camera operators use one dependable part across different setups.

The BA-UC-14 is 2.5 inches long and features four threaded holes for locating pins, a 1/4"-20 captured bolt, and a black plastic thumb knob for secure monitor attachment. By repositioning the pins, users can choose between two anti-rotation pin options to prevent monitor twist and keep it level and secure.

Price: $35.95

"For my Atomos Shogun Ultra and Ninja Ultra, I rely on the BA-UC-14 for fast, secure positioning. I need equipment that behaves like an extension of my instincts, and Ultralight gives me stability and control without slowing me down," says Walter Van Dusen, ULCS Cinematography Brand Ambassador.

AC-AQD04 4-Inch Quick-Release Adapter

The Ultralight AC-AQD04 is a compact 4-inch quick-disconnect arm designed for fast and easy attachment of underwater lights, strobes, snoots, and other camera gear. The AC-AQD04 features a push-button release that allows users to quickly attach or remove equipment with one hand. It is primarily designed for snoots, video lights, and strobes, but functions as a versatile quick-disconnect solution across a range of setups.

ULCS designed the AC-AQD04 with fewer moving parts than comparable products on the market, one-handed operation, and full field serviceability.

Price: $48.95

“There are other brands making similar quick-release products, but ours has the fewest moving parts, can be operated with one hand, and is fully serviceable in the field,” says Kollwitz. “Those three things together matter a lot when you’re underwater or on set, and something needs to change fast.”

The AC-AQD04 has been field-tested by ULCS Brand Ambassador and underwater photographer Andrea Michelutti. ULCS Cinematography Brand Ambassador Walter Van Dusen is currently reviewing the product for cinema applications.

Built for Real-World Camera Setups

Both accessories emphasize ULCS’s focus on practical, durable, and modular solutions for professionals who require reliable performance in demanding conditions. The BA-UC-14 provides cinematographers with a versatile mounting option for modern monitors and cages. The AC-AQD04 offers underwater photographers and videographers a quicker way to attach and detach lights, strobes, snoots, and other gear.

Both products are available now through authorized ULCS dealers and at ulcs.com.

About Ultralight Camera Solutions

Founded in 1995 and based in Oxnard, California, Ultralight Camera Solutions (ULCS) designs and manufactures professional-grade camera accessories for underwater photographers, videographers, cinematographers, and imaging professionals. Known for its modular camera arm systems, precision-machined components, and serviceable designs, ULCS creates products that help photographers and filmmakers build reliable setups for demanding environments.
