Rueter Foundation Repair - Now Offering Lally Columns!

Rueter Foundation Repair has been stopping leaks and stabilizing walls for 8 years and provides a lifetime guarantee. We receive many referrals from RAPV Realtors!

We have recently added LALLY COLUMNS to our services. Many homes have “temporary” lally columns which are hollow, adjustable and DANGEROUS. They can melt in a fire, causing the building to collapse and endangering the lives of occupants and fire fighters.

Rueter Foundation Repair offers 3 options. We check to see if a 12” full-depth pad already exists:

- 1) If so, then the columns can simply be replaced with concrete-filled ones.

If the full 12” deep pad does not exist, then there are 2 options.

- 2) We can jack-hammer the existing slab and pour a 12” deep, 2-foot square concrete pad, with a new permanent lally column on top.
- 3) We can build up a 1-foot high box filled with concrete on top of the existing floor. This last option is less expensive but results in a raised section with a concrete square around the new permanent column.

Please contact Bob Rueter for an on-site inspection and quote. Call or Text 413.345.6800
