

## **Hospitality Cleaning Model - Post COVID-19**

As we eagerly look forward to a return to life and business as we know it, we have to manage our own expectations. We cannot take all that we have experienced and learnt and expect no changes.

We are eager to collaborate with your business on a cleaning solution post COVID-19 to ensure the safety and wellbeing of those in your staff and customer experience circle.

IHS has defined hotel specific cleaning programs to be implemented at accommodation properties, which are in line with the Health Department standards and guidelines. Additionally, we recommend innovative disinfection technologies to support the cleaning operations in Hotels on a daily basis.

### **Building Confidence**

As hotels, restaurants, universities, shops and public places start to re-open and people emerge from isolation, it will be essential to instil confidence through increased visibility of cleaning services and transparency of associated processes. For the overall safety and wellbeing of domestic and international guests, hotels will need to invest in cleaning solutions.

The following measures are extremely recommended:

- **Re-Opening Sanitisation with Bio-Misting Clean**
- **Implementation of Touch Point Cleaning in Public Areas**
- **Public Areas & Guest Rooms New Scope**
- **Infection Control Door Greeters**
- **Out of Hours Reset Detail Clean**
- **Sanitisation Stations**
- **Handheld Germicidal Ultraviolet Blade**
- **OHAir Sanitiser**
