

Real-time Tracking for Personnel & Assets

SAFETY SECURITY ANALYTICS

Is your business protected from risks posed by COVID-19?

LSPTRAK - Safeguarding for your Business and Personnel

Low Cost Network
that integrates with
Smart TV's, Mobile
Phones, Wi-Fi and
Room Keys

Efficiently contact
trace COVID-19
infections **limiting the
quarantining to the
affected individuals
and area** within a
structure

Security –
geofencing means
that the system can
alert managers
when a perimeter is
breached

Monitor and
implement traffic
flow solutions to
**manage
transmission risk**

Safety –
Precise location and
movement of
individuals who
trigger a **duress
alarm**

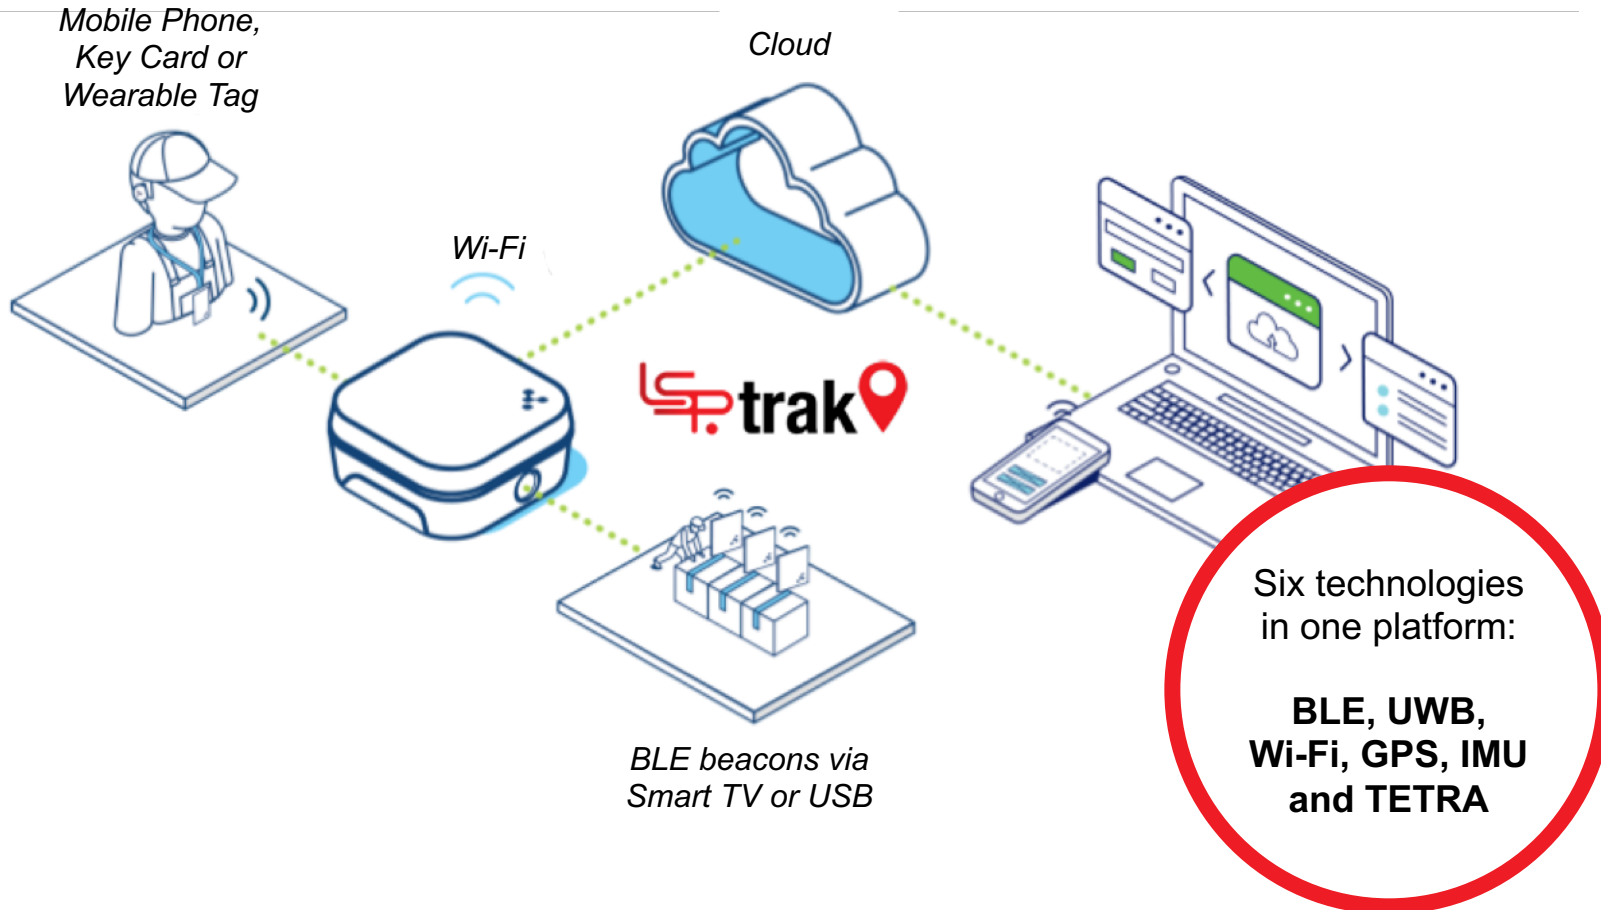

**Proximity tracking is now
more important than ever.**

Lifestylepanel has developed a
precision tracking system
(**LSPTRAK**) that can track and
analyse the movement of
individuals or objects within 30 –
50cm of their actual locations
within multi-storey buildings.

LSPTRAK is compelling for
hospitals, aged care facilities and
any organisation wishing to
manage the transmission of
COVID-19.

How does it work?

The individual or object being tracked can be registered via smartphone handset or an array of low-cost **Bluetooth (BLE) beacons**.

**Times are challenging.
You need a solution fast
that won't cost the earth.**

LSPTRAK creates a Bluetooth network which has demonstrated advantages in deployment over alternative technologies including RFID, 3G/4G/5G, Sigfox and LoraWan:

- ✓ It does not require expensive networking as it uses existing infrastructure
- ✓ Easy and quick deployment within days
- ✓ Low-cost solution

Six technologies
in one platform:

**BLE, UWB,
Wi-Fi, GPS, IMU
and TETRA**

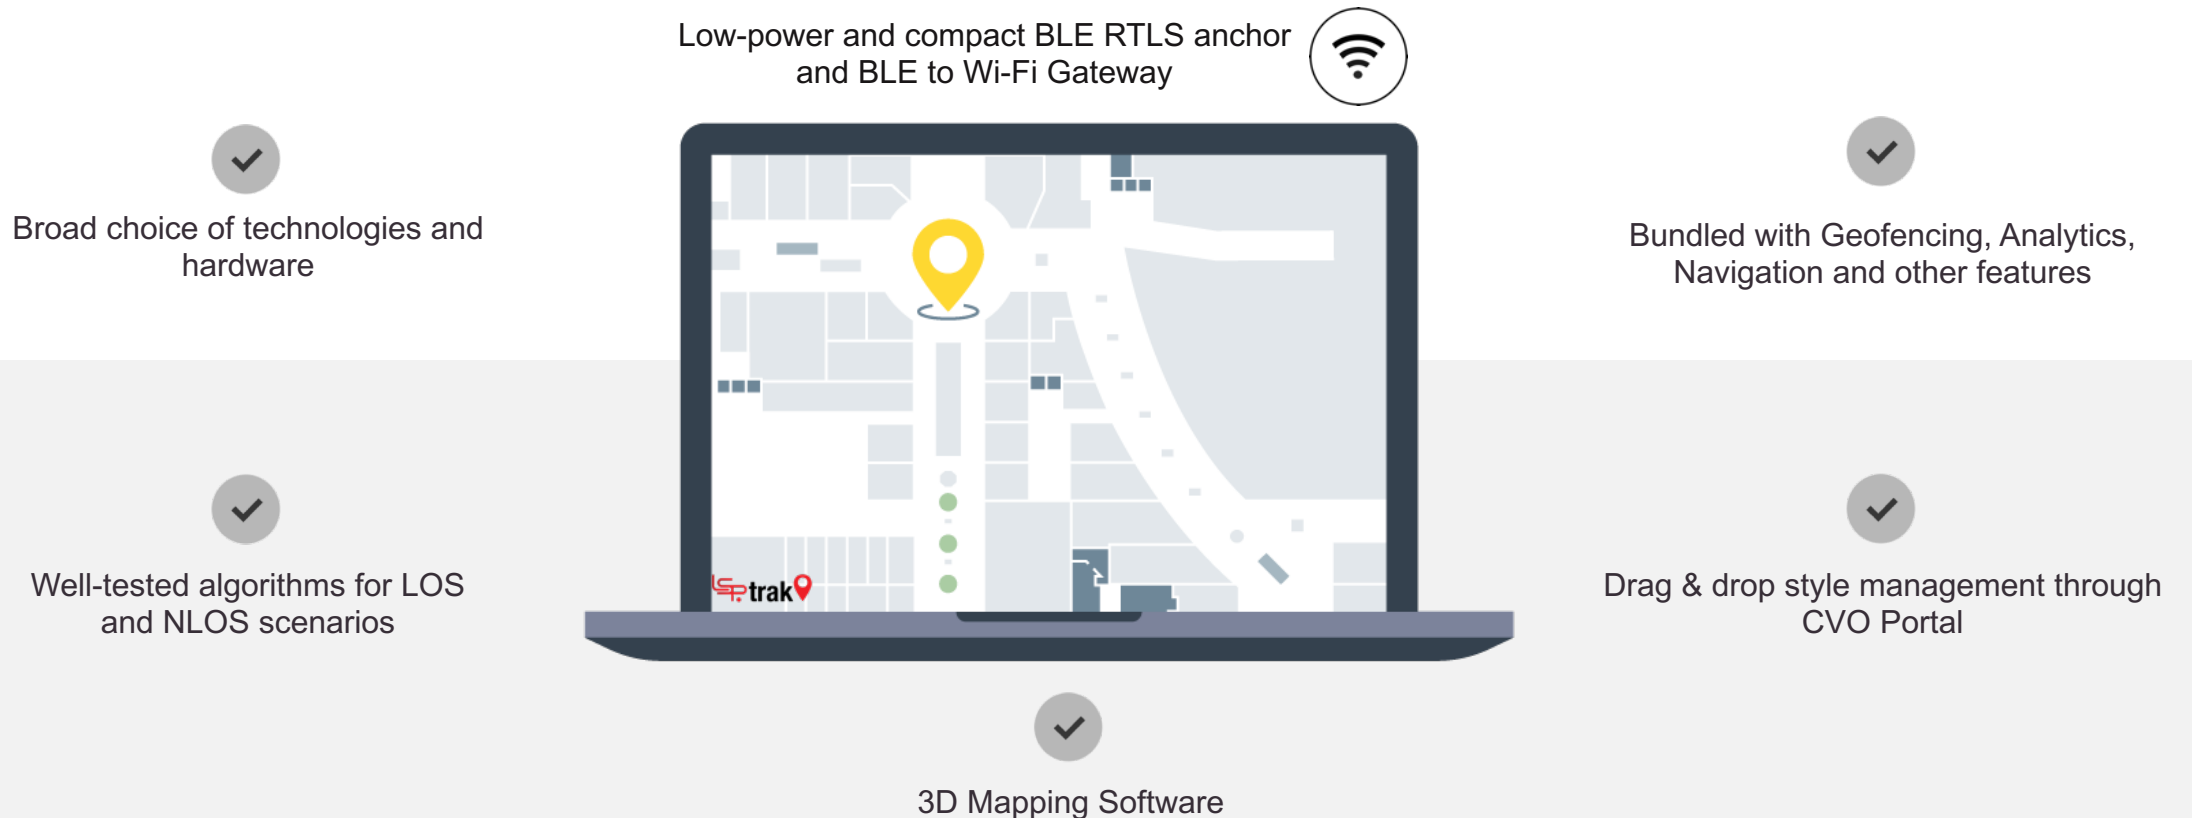

Healthcare - Industrial - Enterprise

Low Cost Network	Does not require expensive networking as it can use existing infrastructure & networks	
Quick Deployment	Easy and quick deployment within days	
Incident Reporting & Panic Alerts	Locate personnel in need within seconds after a wearable panic button is pressed	
Evacuation Visibility	Immediately see how many people have reached muster stations and who has been left behind (along with their location)	
Customer Safety	Ensure patient safety with real-time position monitoring and alerts when they leave designated areas or enter restricted zones	
Attendance Time registration	Automatically register the time when your workers enter and leave the workspace	
Safety Breach prevention	Ensure workers are safe and respectful of workplace policies by getting alerts upon unauthorized entrance	
Two-way Communication	Provide direct, efficient communication to staff for real-time operational requirements or notifications and promotions to guests	
Traffic Flow & Precision Tracking	Monitor traffic flow and analyse the movement of individuals or objects within 30 – 50cm of their actual locations within multi-storey buildings	
Monitoring of Conditions	Monitor light, temperature, or other environmental factors	
Data Analytics	Gain clear insight into your facility from an accessible dashboard	

FAST LOW-COST INSTALLATION

LSPTRAK can be deployed within days on existing infrastructure and networks for a high-end solution with a low-cost outcome

LSPtrak FEATURES

MOBILE REAL TIME LOCATION SYSTEM (RTLS)

Mobile RTLS includes tracking smartphones and displaying their locations

The mobile SDK for Android and iOS calculates the coordinates using **BLE signals**

The resulting data is sent to the CVO Portal via REST API

LOCATION ANALYTICS

Useful insights out-of-the-box

Analyse dwell-time, popular zones, geofencing events, campaign statistics and device statistics using the available UI widgets in CVO Portal

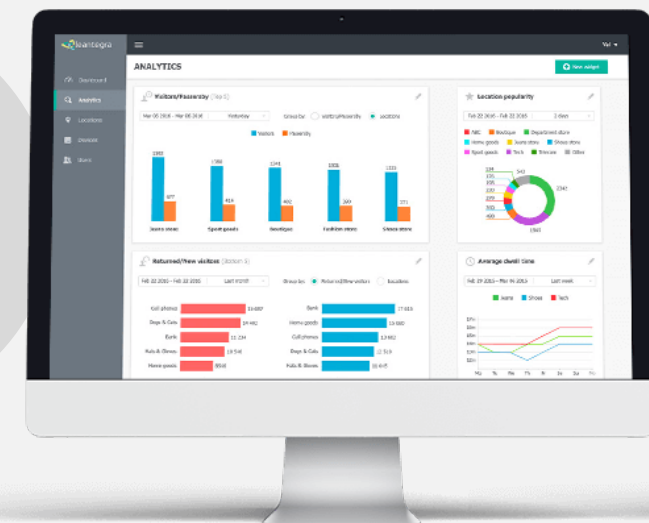

Connect BI tools through SQL interface

Use your existing BI tools, such as Tableau or PowerBI, for advanced reporting or finer-grained analytics

Create new widgets and reports

Advanced constructor for analytics is available in CVO Portal: select filters, dimensions, data sources and chart types. No need for programming to create the new reports

Get deep and broad insights into location data, such as foot traffic metrics

ALERTING SERVICES

- ✓ List, map, filter and search the alerts by different parameters
- ✓ Alert processing through standard or custom workflows
- ✓ Background timers for SLA compliance and escalations
- ✓ Assign trackables, such as people or assets, to each alert
- ✓ Visual notifications, e-mails or SMS for the alert statuses
- ✓ Optional: analytics and custom reporting for the alert records

GEOFENCING

Enable Safety and Better Monitoring

By configuring the geofencing zones and rules you can easily monitor the locations of interest for the needed trackables: employees, visitors or equipment

Clock In-Out for Employees or Equipment

Automatically track and record the events of entering and exiting certain areas by employees or equipment; avoid manual record keeping and extra efforts

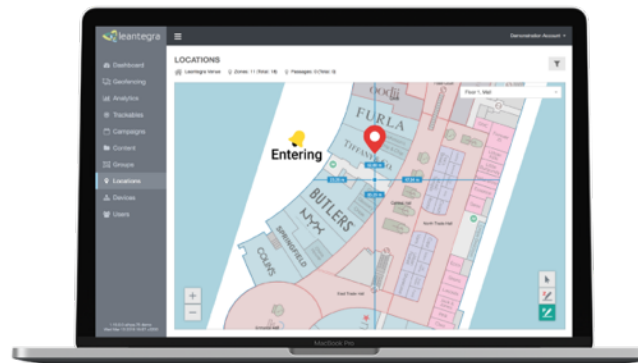

Safety Monitoring and Enforcement

In hazardous environments, such as oil & gas facilities, underground mines or warehouses with chemicals - trigger alerts when somebody enters dangerous zones or spends more time than allowed (maximum dwell time)

Building Security

Role-based authorization for entering certain areas inside or outside your buildings can be configured for any trackables or groups of trackables

Trigger alerts and notifications for perimeters using “On Enter”, “On Exit” or “Dwell Time” events

MONITORING OF ENVIRONMENTAL CONDITIONS

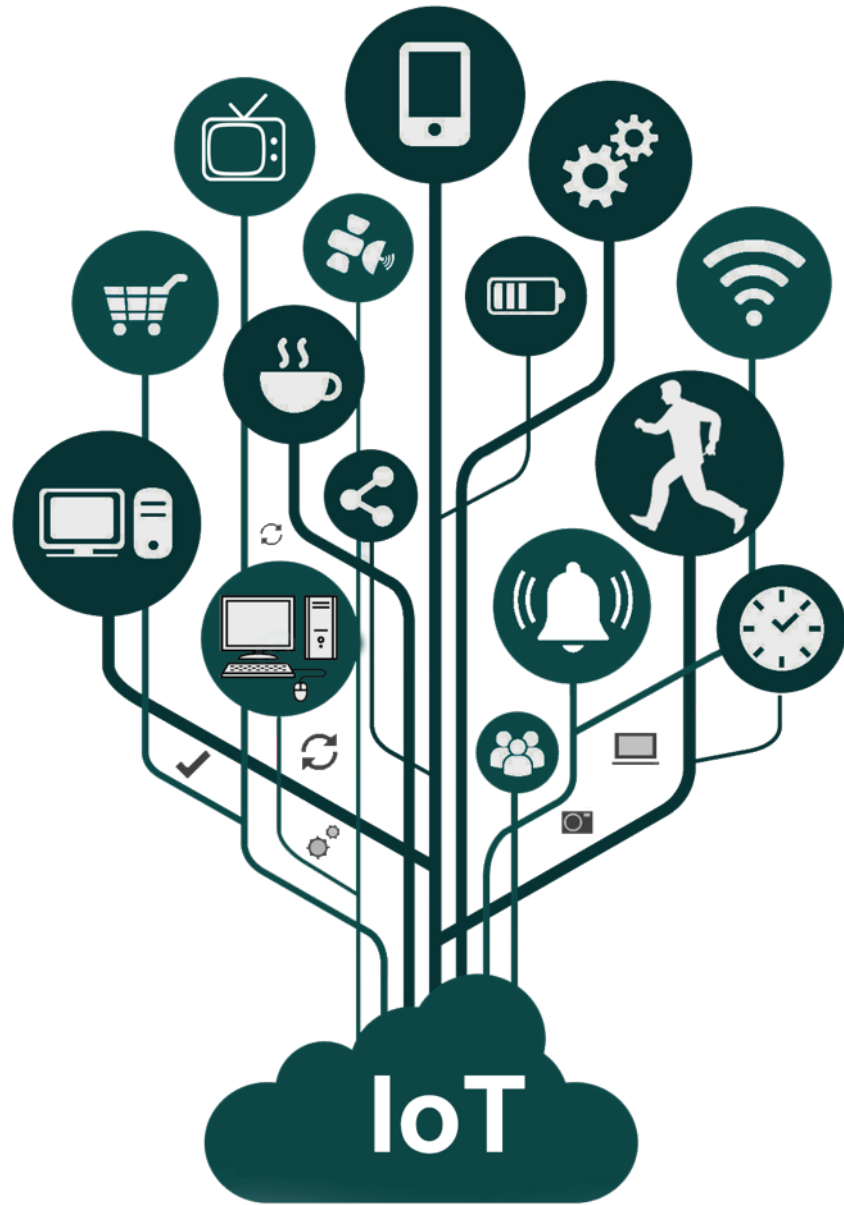

Monitor temperature, light, or other environmental factors in real-time with sensor-rich tags

Gain powerful insight into the environmental conditions within your facility, enabling you to create **cost saving** processes based on accurate data
