

Keeping London Health Centres running

Cougar has been fortunate in securing servicing and replacement work for a number of London Health Centres.

In this case the existing pressurisation unit pump was seized, the ball float valve on the break tank stuck fast and the wiring within, a task for any Sudoku enthusiast to sort!

Just four hours later, a replacement unit from stock was delivered to the site, installed, commissioned and the site up and running.

LTHW, MTHW, HTHW or Chilled water systems, sealed or spill back!

We look forward to your future enquiries.
