

# The Beating Heart of your business!!!

Image: Gerd Altmann

Your old pumps are inefficient. Costing you power, they are also prone to failures that adversely affect your business and your maintenance budget.

I would say that wouldn't I? It is a fact.

The cost of a pump is about 3% of its lifetime cost. The biggest costs are power, and maintenance.

By replacing them with new, energy-efficient pumps, you get reliable, low-cost pump operation, and in many cases the cost to replace can be recovered inside 2-3 years.

Cougar, at the very heart of pumping operations.

Call us today to find out more!!!
