

GRILL PHIL...

Phil, anything new pump-wise in 2024?

Well, you may remember me previously mentioning Fire Sets.

As they tend not to run very often Fire Sets can be easily forgotten.

Our American friends at Peerless Pumps have created a new system called Fireconnect® which is cloud based and provides remote monitoring of fire pump systems. It can be retrofitted to any system.

Cougar has three sites in the UK booked to install the system which really is the bee's knees, and yes, you do need it!

THE TECHNICAL BIT...

65 pieces of system data can be reported on continuously, alerting you to any emergencies such as leaks, flow rates and so on.

For those of you responsible for fire systems you will understand the enormous value of such monitoring.

Naturally you can see all of this on your smart phone, from any location.

If you want to know more, please click the link below or give me a call.
