

“Oh, I do like to be beside the seaside!”

A mere 200m from the sea in Croatia this super Strate sewage installation handles all the sewage and also copes with the high salinity in the area by virtue of highly resistant anti-corrosion treatment. There, that's the technical bit.

What it means to you is we can cleanly, safely, and efficiently (much more so than any submersible sewage pump) handle waste and sewage water even when located in contaminated situations.

Got a tough job that you need handling?

Give us a bell, or email.
