

GRILL PHIL

Phil, how long should a pump last?

Great question.

The limits on a pump's life are dependent on the quality of the unit you buy (not all makes are equal), what type of work you want it to perform (harsh chemicals vs. clean water for example), how well it is installed, and how well you service the pump through its life.

Recently some Peerless fire pumps came up for replacement that were installed in 1974. The pumps could have been overhauled and brought back to as new, but it was not the pumps that had failed, it was the diesel engine drivers.

If you do not have the time or resources to service your pumping systems, please let me know and I will be happy to arrange a site visit and offer a service agreement for your peace of mind.
