Water Professionals Appreciation Week is taking place October 3-11. Join us in celebrating the hard work and dedication of the operators, engineers, technicians, and other water professionals on campus who work every day in stewarding our water resources. It is their diligence that ensures that we can enjoy fresh, delicious tap water to drink, so that the sewers continue flowing, and so our creeks are protected from runoff and pollutants!

The fourth annual week provides the opportunity to showcase the value of water services and the important role that water professionals play in providing these services. Within LBRE, there are over 25 staff that are passionate about water at Stanford. Visit the [Water Resources website](#) to learn more!
