

Fighting the Opioid Epidemic. Together.

Tennessee's Academic Detailing Program

What is Tennessee's Academic Detailing Program?

Tennessee's Academic Detailing program strives to reduce our state's high rates of substance use disorder, overdose and death caused by prescription opioid medications, through clinician awareness and education about safe and effective management of opioid treatment for pain management.

What is Academic Detailing?

Academic Detailing is an innovative, one-to-one outreach technique that empowers clinicians to provide evidence-based information to their clinical colleagues and patients. By combining an engaging, interactive approach with effective medical practices backed by scientific research, trained academic detailers meet with clinicians in their local communities to assess the needs of their practices and patients.

These interactions identify tailored, evidence-based clinical recommendations which promote positive change in behaviors, supported by ongoing professional relationships among colleagues working together to improve safety and health outcomes for their shared patients.

What are the goals for Tennessee's Academic Detailing program?

Through clinical awareness and education on safe and effective opioid treatment for pain management, Tennessee's Academic Detailing program strives to reduce our state's high rates of opioid substance use disorder, overdose and death.

ONE Tennessee is a 501(c)3 not-for-profit organization established in 2018 to prevent the harmful effects of opioid medications through clinician education. It serves as the lead entity to facilitate collaboration among health care organizations and leaders to advance one of the four focus areas identified during the 2017 "Turning the Tide" summit convened by the Tennessee Department of Health:

- Provider education.
- Patient education.
- Acute pain management in emergency department settings.
- Acute pain management in perioperative settings.

With funding support from the Centers for Disease Control and Prevention (CDC) administered by the Tennessee Department of Health, ONE Tennessee established the Tennessee Academic Detailing program in 2019. A partnership was formed with the National Resource Center for Academic Detailing (NaRCAD) and the Tennessee Pharmacists Association to engage and train 20 health professionals to serve as Academic Detailers who provided information and support to their clinical colleagues across the state. Since the inception of the program, information has been provided to 24 primary care providers through Academic Detailing sessions. Quantitative and qualitative data are currently being collected and compared to baseline data, to determine the program's impact in its first year.

Why is Tennessee's Academic Detailing program focused on prescription opioid medications?

In 2017, Tennessee ranked 17th highest among states for the rate of overdose deaths per 100,000 populations, with an increasing percentage of overdoses involving illicit opioids such as heroin and fentanyl.

In 2018, the most recent year for which data is available, the Tennessee Department of Health reported 1,304 deaths from opioid-involved overdoses, 16,363 outpatient visits, and 7,202 inpatient stays for non-fatal overdoses, resulting in significant costs to health systems and payers in Tennessee.

There is good news.

The percentage of overdoses in Tennessee involving prescription opioid medications has declined since 2015. According to the Tennessee Department of Health, the number of patients filling prescriptions for opioid pain medication has

decreased from a peak of 2,040,000 opioid prescriptions in 2015 (309 prescriptions for every 1,000 people) to 1,028,000 in 2019 (189 prescriptions per 1,000 people), representing a decrease of 37.3%.

This improvement has been attributed to development and use of the state's Controlled Substance Monitoring Database (CSMD) to enable clinicians to check for previous prescriptions for their patients, and regulations limiting the amount and duration of opioid prescriptions enacted by the Tennessee State Legislature as a result of TN Together legislation adopted in 2018.

There is room for improvement.

- Tennessee ranks #1 for the highest opioid prescription rates at 94.4 per 100 people, compared to our neighbor state of Kentucky, ranked #3 with 86.8 opioid prescriptions per 100 people.
- In 2019, there were 5,368,852 opioid prescriptions filled for our state's population of 6,770,010, totaling 793 opioid prescriptions filled for every 1,000 persons in the state.
- Additionally, overdoses involving a combination of opioid and benzodiazepine prescription medications account for a significant number of overdose deaths with 5.3 per 100,000 Tennesseans in 2018.

What are the desired outcomes and targeted objectives for Tennessee's Academic Detailing Program?

Tennessee's Academic Detailing Program is designed to minimize the risk of opioid use disorder and opioid-related overdose and death for people in Tennessee, as indicated by the following:

- Use of alternative treatments for pain management prior to prescribing an opioid medication.
- Screening and risk assessment of patients before prescribing an opioid medication.
- Prescribing lowest dose of morphine milligram equivalent (MME) dosage for the shortest duration necessary for effective treatment.
- Monitoring and periodic re-evaluation of risk for patients requiring longer-term treatment.
- Referrals to mental and behavioral health services for treatment of opioid use disorder, when needed.
- Sharing of information with patient, family and caregivers to increase awareness of risk, alternatives to and appropriate use of opioid medications.
- Sharing of information with clinical colleagues and peers for coordination of care to improve the safety and health outcomes for patients.
- Sharing of information with public health and research entities to identify and increase adoption of best practices.

In 2020 and 2021, ONE Tennessee will build upon initial efforts to achieve the following:

- Adapt to minimize the spread of COVID-19 by offering virtual training for Academic Detailers, and by supporting the virtual delivery of information to clinicians via e-detailing sessions.
- Foster opportunities for mutual support and shared learning among Academic Detailers and stakeholders through establishment of an Academic Detailing Advisory Group, a private group on social media, learning events and media articles.
- Increase the number of trained Academic Detailers from 20 to 40.
- Increase the number of clinicians receiving information through Academic Detailing sessions from 24 to 200, with focus on communities with high rates of opioid prescriptions and opioid-involved overdose and death.
- Decrease the number, amount and duration of opioid medications prescribed and the number of individuals filling prescriptions for opioid medications, particularly in communities heavily impacted by opioids.
- Build capacity and support for Academic Detailers through Master Detailers to provide training and coordination support for detailing at a regional level.
- Incentivize Academic Detailers and participating clinicians through compensation for their time, continuing education credits for training received, and recognition by professional associations.
- Develop informational materials for patients, family members and caregivers that are convenient for clinicians to distribute at the point of care.
- Integrate with other clinician education delivery mechanisms, including clinical education programs, mobile applications, and value-based payment initiatives.
