

January 4, 2021

Dear Valued Customer,

Due to the rising cost of ocean, ground freight and manufacturing costs World Centric is implementing a price increase for a significant portion of our product line. Additionally, PLA (polylactic acid) resin, the raw material used in the manufacture of our PLA products continues to increase in cost. Accordingly, these items will undergo an additional increase. These increases will be effective for all warehouse orders received on or after Monday, February 1, 2021. Factory-direct container and custom print orders will be effective immediately. Your World Centric sales representative will provide you with an updated price list that details new pricing and can answer any questions you may have.

We reserve the right to restrict order size not to exceed 105% of historical average until the price increase goes into effect.

World Centric is committed to providing high quality products, maintaining competitive pricing, while donating at least 25% of our profits to global grassroots social and environmental programs and to offset our carbon emissions from raw material to delivery. We appreciate your continued business and partnership.

Sincerely,

Mark Stephany, SVP of Sales
