

Upcoming Studies 2021-22

Requirements

1. Member of the National Dental PBRN
2. Completed the online network Enrollment Questionnaire
3. Completed a human subjects research protection training course online

Post-Operative Pain Study (POPS)

- Study to understand pain that patients may experience during a 3-week period after dental surgical procedures.
- Practitioners complete pre- and post-procedure case report forms online, do usual care otherwise.
- Patients report post-operative outcomes through a mobile health (mHealth) app.
- Target enrollment: 3,147 patients; each practitioner enrolls about 15-20 eligible patients.
- Both practitioners and patients compensated for research time.
- *Recruitment open now.*

Dental Implant Registry

- 3-year longitudinal study of dental implant outcomes, beginning at prosthesis placement.
- Target enrollment: 2,000 implants; each practitioner enrolls about 10 eligible patients.
- Web-based data collection for practitioners and patients
- Expected start date: Spring 2022.

Risk Factors Associated With Peri-Implantitis Disease

- Determines prevalence of peri-implantitis in routine clinical practice and bacterial/inflammatory risk factors.
- Target enrollment: 1,000 patients who have had implants placed and restored for at least 60 months.
- May include microbial and gingival crevicular fluid sampling.
- Expected start date: Summer 2022.

Diagnosis of dental hard tissue conditions

- Establish perceptions and risk factors for hard tissue conditions
- Practitioners (dentist or hygienist) will evaluate images of dental hard tissue conditions
- Expected start date: Fall 2022.
