

Attached you will find a summary of the COVID-19 Impact data collected last week.

Some of the major takeaways from last week's data are:

- Among respondents, the total number of confirmed cases in individuals served is down almost 32% from the previous week.
- The number of confirmed cases among staff is down nearly 19%
- However, the number of deaths among respondents increased by nearly 30% over the previous week.
- Individual deaths in the NYC Metro Region account for 35 of the 46 deaths since last week
- Total staff deaths have increased by 9 since last week, an increase of over 37%. Seven of those 9 were located in the NYC Metro Region.
- The certified residential capacity of respondents outside of the NYC metro area was only up 1.68% since the week prior but the number of individuals infected to date grew by nearly 50%
- Total certified residential capacity of respondents was generally consistent with the week prior, growing by just 0.92%.

Again, consistency is key with this survey, so please take the time to respond every week.

Data is collected every Thursday.

Arc Chapters should respond to the survey issued by The Arc New York and their responses will be incorporated into the NYDA results.

Thank you.
