

Vaccines are safe

Vaccines are made in labs to help our bodies defend against diseases.

Some of the COVID-19 vaccines do not take as long to make as other vaccines. They were made quickly because COVID-19 was spreading rapidly.

None of the normal steps in the vaccine process were skipped.

The vaccines were tested with thousands of volunteers of different ages, races, and ethnicities.

Short term mild side effects from the vaccine could be a sign your body is building immunity against the virus. This is normal.

The vaccines meet all safety standards and are recommended by health experts and doctors.

Vaccines help us keep safe from many diseases and we want COVID-19 to be one of them.

Schedule a vaccine appointment when it is your turn online at www.sccFreeVax.org or by calling (408) 970-2000.
