Making the World You Want to Live in

Waldorf kids make things. They make things from scratch. From the utensils they cook with to the clothes they wear to the textbooks they study. And because they make so many different things, they naturally become creative problem solvers. Their ideas have purpose. And they put them to good use. Give Waldorf kids a problem, and they'll quickly think of all the ways they can solve it.

Oh, and they'll have fun doing it, too.

ORANGE COUNTY

## The Education Revolution will not be downloaded.

Mainstream education is failing our children. It forces us to choose between academics and the arts; between free play and structured study; between analytical thinking and creative thinking. But those are false choices. They result in an education that is expedient, but lacks substance. They leave our children empty and limit the brilliance of their possibility.

Waldorf curriculum rethinks what's possible. We believe that our children deserve an education that fills them with beauty, meaning and wonder. They deserve an education that's joyful, creative, thorough, advanced and substantive. They deserve an education that touches every part of who they are.

Our Waldorf School of O.C. provides a decidedly independent form of education that creates independent thinkers. Learning that inspires; learning that endures; learning that our children will treasure

Though nearly 100 years in the making, Waldorf Education remains the most refreshing independent school movement of our time. Founded by Rudolf Steiner in Germany in 1919, it has blossomed throughout Europe, North and South America, Australia, New Zealand, South Africa, Russia, India, China, the Middle East and Japan.

The appeal is clear; a synergistic, complete and logistic learning experience that takes the best of classical education and makes it relevant now. It uses science to inspire artistic thinking, and it uses art to inspire scientific thinking. Each subject is intertwined with every other, providing nuance, context and deeper meaning for each. In this way, music, art, drama and movement are as integral to the curriculum as math, science and language arts. No other form of education provides an academic experience this enriching, authentic and joyful. It's no wonder Waldorf graduates are sought after by universities and employers. They have been educated with heart.
