

Versus Visibility for Acute Care

Improve communication, productivity, and safety

Nurses are the lifeblood of healthcare. Let's make their jobs easier.

Your nurses are constantly busy. Making their jobs easier not only helps with nurse burnout, but also patient safety. With Versus, nurses can practice with peace of mind while spending less time searching and more time at the bedside.

Reduce Search Time for Equipment

Nurses and biomedical teams alike spend hours every day searching for equipment. With **Asset Tracking and Management**, that time can be re-directed to improving patient care and safety.

- ▶ Know exactly where equipment is campus-wide
- ▶ Save valuable time for both nursing and biomedical staff

Call for Help — Anytime, Anywhere

With **Visibility Staff Assist**, simply press the button on your Versus badge and an alert is sent to security and/or nearby nurse stations, communicating your name, exact location, and the time of your call, so help can be sent quickly.

- ▶ Enhance nurse safety
- ▶ Improve situation response times

Immediately Find Your Co-Workers

Use **Visibility Companion** to locate anyone wearing a Versus badge — by just glancing at your computer screen.

- ▶ Reduce noise from overhead paging
- ▶ Experience fewer interruptions from phone calls

Automatically Document Patient Care & Exposure

Reports Plus™ Analytics automatically documents and validates the great patient care that nurses provide. And, in cases of contagious patients, you'll know immediately who was in proximity to the patient and for how long.

- ▶ Defend against patient complaints with accurate data
- ▶ Automatically document rounding and time at bedside
- ▶ Mitigate the risk of dangerous contagions

"Even though we have all been trained to handle dangerous situations, this technology allows us to have some peace of mind. Knowing that we can summon help by simply pressing a button is a real comfort."

Vicki Svensson, RN
Nurse Manager, Behavioral Health
Western Maryland Health System

Visibility Staff Assist: A Joint Commission Leading Practice

Violence in healthcare may not be entirely preventable, but its impact can be mitigated. This is the conclusion of a two-year study conducted by Trinitas Regional Medical Center, published in The Joint Commission's Leading Practice Library.

Although Trinitas saw an increase in patient attacks on staff, days lost from work due to assault decreased by 93.5% after installing Visibility Staff Assist.

"The use of this technology has no doubt increased the response rate of security and clinical staff when a code is called for a combative patient."

John Dougherty, Security Director
Trinitas Regional Medical Center
