

Wireless Temporary Call Systems Meet Your Critical Needs When Every Moment Counts.

VisionLink II™ Wireless Nurse Call System

Life Safety Made Easy since 1994

SCALABLE AND EXPANDABLE

Our wireless nurse call systems link your patients with care staff using our safe and reliable 900 MHz spread spectrum wireless technology. Personal pendant transmitters, wireless wall mount pull stations and bed stations signal assistance from an associated bed or room location to the master station and out to your staff in moments. No expensive licenses or upgrades are required to add more equipment at any time. Our signal repeaters simply plug into an outlet and are available with battery back up. Our LED corridor and zone lights are connected on a single pair of wires for fast, easy installation. The Vision Link II® also includes call analysis reports, maintenance alerts, remote access, device monitoring, and automatic backup at no additional cost.

FLEXIBLE SOFTWARE

Engineered for the ease of use, our systems include free pre-programming, staff training, and technical support for the life of the system. Statistical call reports with response times, patient bed turn notification, flexible alarm notification with escalation and so much more are all standard features of the powerful and flexible Vision Link II® integration platform. For smaller applications, our desktop MicroVision systems provide audible and visual workstation alerts wherever needed.

STAFF AND PATIENT MOBILITY

Send alerts to staff by assigned area and escalate to additional groups as needed. Caregivers can receive alarm call notification not just at nurse station consoles, but also on our LAN connected clients, Android and IOS devices, pocket pagers, email, cell phones, iPod's, iPad's, remote monitors and more with flexible escalation for unanswered assistance calls. All events are logged including staff response time for password protected management reports. In addition to alarm notification, text messages can be silently sent from any console or computer to any pocket pager, cell phone, or employee group. Notify staff for door/window exit, access control alarms, motion detectors, bed/chair exit pads, mass emergency notification, whatever you require.

ADVANTAGES

Every wireless patient device is fully supervised for both operation and battery life. All of our systems provide notification when a low battery or inactive device is detected. In contrast, it takes some systems up to 24 hours to report an inoperative station and some wired and wireless nurse call systems are not supervised at all. Systems Technologies proudly manufactures all of our wireless 900MHz devices in the USA.

Rapid Deployment
Temporary Nurse Call

MicroVision™

Wireless Call Systems For Staff & Patient Safety

STANDARD FEATURES

- 900 MHz spread spectrum technology
- Alarm calls reset at the source
- Easy user programming
- Multi-line LCD display
- Audible tone
- Programmable relays
- Supervised for battery life & operation
- User replaceable long-life battery

EQUIPMENT OPTIONS

- Wireless Single & Dual Bedside Stations
- Wireless Emergency Pull Stations
- Wireless Push Button LED stations
- Wireless Door & Window exit sensors
- Wireless Staff Duress buttons
- Repeaters for more area coverage

APPLICATIONS

- Temporary Nurse Call Systems
- Renovation & Retrofit Buildings
- Assisted & Independent Living
- Medical Offices & Clinics
- Senior Housing
- Staff Duress
- HUD Housing
- ...and Many More!

INEXPENSIVE & EXPANDABLE

Whether your application is large or small, MicroVision systems provide an inexpensive wireless solution for your call system requirements. The console simply plugs into a standard electrical outlet and "hears" the fully supervised wireless signals from all wireless stations and transmitter devices. Stations can be easily surface or flush mounted for a clean, finished appearance and are powered by a 3V user replaceable lithium battery. When you order a system it will arrive pre-programmed, ready to use and includes a one year warranty on all parts. If any transmitter will be used more than eighty five feet from the console on which it annunciates, a repeater may be necessary to boost the signal. Repeaters plug into a standard electrical outlet and no other wiring is required.

STAFF & PATIENT SAFETY

When any call station, button, or device is activated a wireless signal is instantly sent to the front desk, security, nurse, emergency services or manager to indicate that assistance is needed and where. If desired, single LED corridor lights, with or without sounder, can be added above the room doors. Information can be displayed on your choice of LCD monitors, wireless consoles, wireless LED reader boards, alpha-numeric pocket pagers, cellular phones and more.

With **no ongoing fees or licenses**, mix and match device types and expand anytime!

MICROVISION 200Z CONSOLE

Supports up to 48 device ID numbers and annunciates alerts with a 2 line by 16 character alpha numeric alarm display, audible tone, LED indicators and six powered relays.

MICROVISION 400Z CONSOLE

Supports up to 250 device ID numbers and annunciates alerts with a 4 line 20 character alpha numeric alarm display, audible tone, LED status indicators and two dry relays. This system also supports up to 100 LED single corridor lights, staff pocket paging and text messaging.
