If someone had COVID-19 in the last 90 days

90 Days Post-Infection	Test	Test result	Action
Test to clear isolation 5-10 days post their <u>initial</u> positive test	Antigen only	Positive	Remain in isolation until negative test on or after day 5, or after day 10 (whichever is earlier)
		Negative	Release from isolation after day 5 if test done on or after day 5
Has symptoms of COVID-19	Test immediately – **Antigen only**	Positive	Isolate - follow Scenario 3
		Negative	Return when fever-free for 24 hours and symptoms improved.

Does not have symptoms, but tested within 90 days post infection (against recommendations)	PCR or Antigen (against recommendations)	Positive	Re-test with antigen. If:
			    Positive - Isolate and follow Scenario 3
			    Negative - no action

		Negative	No action
Identified as a Close Contact	Do <u>not</u> test unless symptoms develop.	N/A	Follow fully vaccinated Close Contact on TK-12 Decision Tree. If symptoms develop, follow "Has symptoms" section on **this chart**.
