Get ready for gigabit fiber home internet **done right**

Together with our partner Lumos, we're building a 100% fiber-optic network for our fastest and most reliable home internet ever. Soon you'll see fiber crews in your neighborhood, and here's what you can expect.

During construction

- ?** Where we'll be working
Crews will install fiber using low-impact directional drilling, typically 36 inches underground, within public rights-of-way and utility easements—such as sidewalks, street fronts, between homes, or behind property lines. If an easement is fenced in, we may need your help accessing it.
- ?** How long it takes
Work across the neighborhood typically lasts a few weeks. Construction near your specific property generally takes just a few days.
- ?** What you'll see
You may see construction signs, temporary flags or paint in your yard (used to mark underground utilities), and crews using specialized equipment. Please do not remove the markers—they are essential for safety and will be cleared after construction is complete.
- ?** If you have a sprinkler, pet fence, or private line
Public utility locators do not mark private underground features. To help prevent damage, please mark these items using white flags or landscape-safe spray paint, or notify us at lumosfiber.com/tmoconstruction for assistance.

After construction

- ?** Restoration
Once construction is complete, and weather allows, we'll restore any disturbed areas by regrading soil, reseeding lawns, and applying straw matting if needed.
- ?** Next steps
We'll be in touch as service availability nears. In the meantime, join the waitlist now for early access and special offers when your address is ready.

Fiber network construction support

If you have any questions, concerns, or feedback about construction in your area, we're here to help. Visit lumosfiber.com/tmoconstruction, call us at 800-905-9017, or email to constructionsupport@lumos.net.
