The Long Island Association welcomes a panel of experts who will discuss the future of waste disposal on Long Island. With millions of tons of solid waste, and with the Brookhaven landfill scheduled to close in 2024, our region needs to work together to resolve this growing crisis which could impact our economy, environment and quality of life.

There will be a question & answer session.

One of the many benefits of LIA membership is complimentary admission to all of our member strategic committees, policy forums and many of our special events.

REGISTRATION IS REQUIRED-To register, [click here](#).

The Mission of the Long Island Association is to lead and unify the region in order to enhance, strengthen and protect Long Island as a premier place to live, work and play. The LIA shall advocate for policies, programs and projects that create jobs, spur private investment, reduce the federal, state and local tax burden, improve access to and from New York City and improve the overall business climate in our region. We will support economic development, workforce housing, greater state support for education, public safety, clean reliable energy, workforce training and retention, environmental protection, technology and infrastructure investments, and our not-for-profit organizations as well as opportunities for growth, equality and diversity in our region.
