

# The Rural Community Energy Fund

A fund is available to help community groups in rural areas across our Diocese develop renewable energy projects. Organisations within a community of less than 10,000 inhabitants are invited to apply for up to £140,000 to assess the feasibility of installing new energy technologies such as wind, hydro, biomass, solar and anaerobic digestion. Energy efficiency projects and renewable heating systems are also included.

As applications must come from two or more buildings working collaboratively we think this will be of interest to school/church partnerships, multi-parish benefices and deaneries, but this is not an exclusive list and other groups are welcome to look at the opportunity.

We will be hosting a webinar lead by Alan Millar, the RCEF Project Officer on Wednesday 30th September at 12 noon and again at 6pm. Please go to the [website](#) to find out more and join us at the webinar by clicking the link below.
