Aligned with NC Standards

Inspiring Learning Beyond the Classroom

Our field trips combine hands-on exploration, interactive exhibits, and engaging activities designed to spark curiosity, creativity, and a love of STEM.

Find the right field trip for your students in our *full catalogue of offerings*.

Discovering Aviation Field Trips

Students will be **discovering aviation** through aviation history, Charlotte's aviation legacy, and the science of flight. They will engage with simulators, interactive exhibits, and innovations from the Wright Brothers to modern drones. For a more structured experience, groups may add a scavenger hunt for a small fee.

STEM Workshops Enhanced Experience

Sullenberger Aviation Museum's **STEM workshops** bring hands-on learning to life through the exciting lens of aviation. This experience includes everything in our Discovering Aviation field trip with a scavenger hunt plus a private, hands-on STEM workshop in our makerspace, reserved just for your group. It's a unique opportunity to explore, build, and problem-solve together while discovering the exciting world of aviation. With the exception of Little Aviators, all of our STEM workshops are modified by our STEM education experts to fit your grade level from 3rd grade - 12th grade.
