CREATING CURIOUS CLASSROOMS

Discovery EDUCATION

Our partnership with the **Delaware Department of Education and DuPont** continues throughout the 23-24 school year for our middle and high school educators and students. Trusted for over 20 years, we bring innovative EdTech solutions and the highest quality content to educators around the world. **It all starts with our award-winning K-12 platform** that teachers can rely on to design and deliver the most engaging and real-world learning experiences.

Stay on top of all the amazing new things that are in **Discovery Education Experience**.

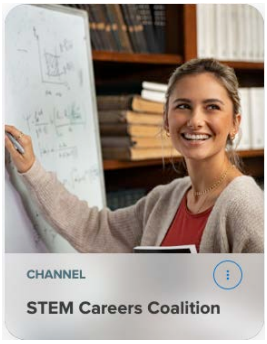

Creating Curious Classrooms is a free professional learning series for school and science curriculum leaders that takes a fresh approach to how the latest digital resources and tools can be integrated into instruction to drive engagement.

An Ounce of Prevention Virtual Field Trip

Communities across the United States are being impacted by the sharp increase in the use of counterfeit drugs, fake pills, and fentanyl. **An Ounce of Prevention** empowers students with knowledge they can use to make healthy decisions and become advocates for prevention in their communities.

The all-new **STEM Careers Coalition's** mission is to empower educators to teach STEM effectively in the classroom, focusing on equity and access to quality education, and building the next generation of solution-seekers at no cost to schools.

> "Discovery Education is committed to providing more support and resources to our CTE pathways."
