

# Make Your Voice Heard

in a survey on challenges municipal water suppliers face in reducing the energy associated with groundwater pumping

•••

Lawrence Berkeley Lab, funded by the California Energy Commission, is surveying municipal water suppliers on the challenges they face in reducing the energy associated with groundwater pumping. The short survey aims to convey your organization's experience with groundwater pumping energy management to policymakers and other stakeholders. The resulting public report will advance understanding of the energy-groundwater nexus in California. It may also inform future efforts to reduce groundwater pumping energy costs by more tightly linking opportunities for energy conservation to groundwater management.

•••

## Benefits of Participation

Participating organizations will have the option to receive an individualized report that shows how their survey responses compare to aggregated results from other respondents.

**Results will be presented in aggregate form and disconnected from organizations' identities**
