**I. INTRODUCTION**

**WHEREAS**, the State Engineer is empowered to make such reasonable rules and regulations as may be necessary for the proper and orderly execution of the powers conferred by law.<sup>1</sup>

**WHEREAS**, Nevada Revised Statute (NRS) § 534.030 provides that if after due investigation the State Engineer determines that administration of a basin is justified, the State Engineer shall designate the area by basin, or portion therein, and make an official order describing the boundaries by legal subdivision as nearly as possible.

**WHEREAS**, the Meadow Valley area is composed of the Dry Valley (198), Rose Valley (199), Eagle Valley (200), Spring Valley (201), Patterson Valley (202), Panaca Valley (203), Clover Valley (204), and Lower Meadow Valley Wash (205) Hydrographic Basins.<sup>2</sup>

<sup>1</sup> NRS 532.120.

<sup>2</sup> F. Eugene Rush, *Ground-Water Appraisal of the Meadow Valley Area, Lincoln and Clark Counties, Nevada*, Ground-Water Resources—Reconnaissance Series Report 27, (Department of Conservation and Natural Resources and U.S. Department of Interior Geological Survey), July 1964.

**WHEREAS**, the Nevada Division of Water Resources estimates that 25,000 acre-feet of water annually is available as the perennial yield from the Meadow Valley area: <sup>3</sup>

“The Meadow Valley area is comprised of several areas which, in downstream order, are hydrologically interrelated. Moreover, Lake Valley, which is north of this area, contributes about 3,000 acre-feet of water per year to Patterson Valley. Accordingly, development in one valley may intercept the supply that otherwise would reach the next valley downstream. As a consequence, the determination of the perennial yield of each small valley is not warranted. Consideration is given only to the perennial yield of the entire area ...”

**WHEREAS**, groundwater committed is the sum of all permitted, certificated, decreed, reserved, relinquished, revocable, and unadjudicated vested claims to groundwater rights.

**WHEREAS**, domestic wells that are exempt from the permitting process represent an additional commitment of 2.0 acre-feet annually per well.

**WHEREAS**, the total committed groundwater resource is 63,911.65 acre-feet annually as summarized in Table 1.<sup>4</sup>

Table 1. Summary of Total Committed Groundwater Resource.

| Hydrographic Basin Name        | Committed (afa) | Domestic (afa) | Total (afa)      |

**WHEREAS**, the State Engineer finds that the current committed groundwater appropriations exceed the perennial yield.
