

PARTICIPANTS NEEDED

TURNER SYNDROME WITH Y CHROMOSOME (TS+Y)

This research study includes parents and caregivers aged 18 years or older of individuals with Turner Syndrome with Y chromosome material.

Participation involves a 45 to 60-minute interview about gonadectomy (surgery to remove the ovaries or gonads) decision-making. We want to know how we can improve this process for families.

Scan QR code for pre-interview survey →

If you are interested or have questions, please email researcher and primary study contact Brady Evans.

Participation includes a \$50 Tango gift card that will be mailed to you after the interview has concluded.
