## Take Home Sheet

3.) Visit our learning lab (<https://phoenix.wayne.edu/learning-lab>)

You can also access the Learning Lab by scanning this QR code above.

The banner features the Wayne State University logo and 'WAYNE STATE UNIVERSITY' text on the left, and 'WARRIOR STRONG' with a login/search bar on the right. Below the navigation bar, the text 'HOW TO USE OUR MAP:' is in yellow, followed by 'TOOL TIPS' in large white letters. A small icon of a person with a gear is on the left, and a large image of an open toolbox filled with various tools is on the right. The background is dark red.

### **Key Features when Using PHOENIX**

#### **❖ Comparing Metrics**

To compare metrics, you will look to the left side of your screen where all the health-related information is. From here you will go down to “Advance Display”, select the dropdown menu and chose “metric by metric comparison”. This will allow you to select 2 metrics and compare them to note correlations if any exist.

#### **❖ Identify Places with specific Characteristics**

To identify places with specific characteristics, you will want to use the “Data filter” and “Map layers” features on the right side of your screen where all the place information is. When you select “data filters” you will be able to identify places by specific population size, population characteristics, and health metrics. Whe you select “Map layers” this allows you to turn population bubbles on and off. Under map layers is also where you can upload point data to help pinpoint specific places on the map.

**\*Note:** If you are having issues with data populating on the map be sure that your filters are turned off. If this does not work, try and go to “Advance Display” and select “none”. This should correct the issue.

#### **❖ Share what you see**

You are able to share what you’re seeing on the map by select the “Image Export” button on the bottom right side of your screen. Form here you are able to edit and rename the image, remove the PHOENIX banner at the top and replace it with you own or your organizations, remove certain map details and terrain, to remove or keep the legend key as well as choose to keep or remove the data source information which cites where the data on the map is being pulled from.

**\*Note:** You are also able to click on the map while using the “Image Export” feature to move and readjust the image to your liking before exporting.
