

## SASKATCHEWAN'S LAKES AND RIVERS ARE AT RISK!

The risk of zebra mussels is real and we are fighting to keep them out of Saskatchewan! Neighbouring provinces and states are infested and we don't want this invasive species in our lakes. Lake Winnipeg as well as lakes in Montana are already infected.

The provincial government is leading the effort to stop the spread of invasive species and have dedicated significant human and financial resources to this fight, but we all need to help with extra resources. If you spend time in a boat, enjoy life on or around the lakes and rivers of our province, or depend on our surface water resources for protecting your livelihood, it's time to step up!

Whether you are a company, group, individual or family, the Aquatic Invasive Species Task Force, working directly with the Saskatchewan Ministry of Environment, needs your support.

The Aquatic Invasive Species Task Force is a volunteer advisory group initiated by the Ministry of Environment and is made up of representatives from industry, stakeholder groups, government and non-government organizations and has been tasked with collaborating on Ministry lead AIS prevention initiatives including educating the public about species that could be invading Saskatchewan's lakes and rivers.

Become educated on aquatic invasive species, practice prevention strategies as they relate to your activities, or simply donate monies - do something!

## BE PART OF THE FIGHT AND ACT NOW!

We all need to help keep invasive aquatic species at bay. Your investments will go to supporting efforts that are in direct alignment with the Ministry of Environment's aquatic invasive species programming and will be an investment in protecting Saskatchewan's lakes and rivers.
