

NOVEMBER IS LUNG CANCER AWARENESS MONTH

Have You Tested Your Home for Radon?

November is lung cancer awareness month world-wide. Now is the time to bring additional attention and focus to radon induced lung cancer, the cancer that kills more people than breast and prostate cancers combined. Lung cancer from elevated levels of radon causes over 21,000 deaths each year in the United States. Radon is a radioactive gas that is released from normal decay of uranium, thorium, and radium in rocks and soil. Radioactive particles are released into the air and damage the cells that line the lungs, leading to lung cancer.

The only way to know if your home has elevated levels of radon is to have it tested. ALL homes-old or new including those with basements, crawlspaces or over slab foundations have equal chances of testing high for radon.

Contact Precision Environmental Services at 708-625-4488 for an accurate and professional test for only \$175 in the month of November. If you already tested and require radon mitigation, call Assure Home Inspections at 708-692-7877.
