### Comments on Shade Sizing from Steve Landis:

Calculating maximum sizes for cordless shades is not an exact science. This chart is our best estimate for a normal drapery weight fabric and a standard lining.

Larger shades have and can be made, but you run the risk of the spring not being able to handle the weight or length.

The minimum width of 26" is not negotiable due to the size of the spring.

**Caution:** Blackout lining, interlining and upholstery weight fabrics will reduce the effectiveness of the spring.
