

# Storm Warning

Dear Valued Customer,

As you may already know, there is a good chance over the next few days that the weather in Florida will become rough to say the least. Xact Supply would like to offer a few tips to help your printers survive the storm.

1. Make sure all of your unnecessary electronics are powered down correctly and then unplugged from any power source, including battery back ups.
2. Some of your machines have dry toner that does not survive when humidity levels rise. If possible use plastic shrink wrap to encase your machine from the elements. You may also decide to cover your machine with a tarp for added protection in case of a roof leak.
3. Water also rises. If you are in a low lying area, please consider putting your electronics up on a shelf or on a pallet. Every inch you can safely raise your machine off the ground also raises your chances of having a properly working machine when you return.
4. If you do happen to receive water damage to your electronics, please allow them to dry out for at least 24 hours before turning them back on.

Most of all, please take all of the necessary precautions to keep yourself and your families safe during this storm. Valuables can be replaced, people cannot. If you are in an evacuation zone, please do so if asked. If we can be of service to you in the preparation of this storm please call and let us know. We will be happy to help in any way we can. Thank You!

Stay Safe,

Xact Supply Co. Inc.
