

WIRED The Best Apple 3-in-1 Wireless Chargers

SIMON HILL JULIAN CHOKKATTU. GEAR. JAN 3, 2025 8:32 AM

Keep your iPhone, Apple Watch, and AirPods topped up with these WIRED-tested docking systems.

IF YOU HAVE an iPhone, AirPods, and an Apple Watch, congrats! You have the holy trinity of Apple products. But keeping all these gadgets powered up can be annoying, since they all have individual cables and proprietary charging solutions. Why deal with all that hassle when a single 3-in-1 Apple charging station can accommodate everything?

Our Best Wireless Chargers guide has a few recommendations, but many more great docking systems exist for Apple devices. After years of testing, these are our favorites. Be sure to read our other Apple guides, including the Best MagSafe Wireless Chargers, Best MagSafe Accessories, Best iPhone 16 Cases, Best iPhone, Best Apple Watch, and Best AirPods.

Best Overall

Belkin 3-in-1 Qi2 Charging Stand

PHOTOGRAPH: SIMON HILL

Like its predecessor, this classy chrome charging tree suspends two of your Apple gadgets in midair, with a spot for the AirPods case on the broad circular base. It can recharge your iPhone at the fastest 15-watt charging speed Apple allows, and it can also fast-charge the Apple Watch Series 7 or newer (not the SE). Drop the AirPods Pro (or AirPods with wireless charging case) onto the base, and you'll be topping up all these devices from a single outlet. Aside from the latest Qi2 certification, the base is now more rounded, and the iPhone charging pad tilts to your preferred angle. Everything sits securely in

place, and you can even flip your iPhone into landscape orientation to watch a video while it charges or to trigger StandBy mode. The braided USB-C cable is permanently attached.

Best for Apple's StandBy Mode

Twelve South HiRise 3 Deluxe

PHOTOGRAPH: TWELVE SOUTH

Apple added a feature in iOS 17 called Standby, which turns the iPhone into a clock on your nightstand with weather information when you put it in landscape orientation on a wireless charger. (The screen dims if you have an iPhone with an always-on display; if not, you can tap the screen to see the time.) Twelve South's 3-in-1 is an elegant wireless charger for the nightstand and gives the iPhone plenty of breathing room to rotate it to landscape mode and take advantage of StandBy.

It's Made for iPhone (MFi) certified, so it'll recharge your handset at the fastest 15-watt speed possible. I also like that the iPhone charger can swivel up and down, so you can better position the angle of your phone screen.

On the base is a fast charger for the Apple Watch that you can flip up or charge flat, and the back has a spot for the AirPods or another wireless earbuds case. It's nice and weighty and doesn't slide around easily. It comes with a proprietary and removable charging cable that runs into the base, along with a charging brick, and Twelve South includes international plug adapters for the US, UK, EU, and AU if you want to take it on your travels.

Best Compact 3-in-1 Stand

otterbox 3-in-1 Charging Station With MagSafe

PHOTOGRAPH: SIMON HILL

Folks seeking something a little more compact for the nightstand will appreciate this solid aluminum 3-in-1 charging station from Otterbox. It can charge all your Apple gadgets at top speed and comes with a 6.6-foot cable and a 36-watt wall charger. The MagSafe pad holds your iPhone securely, and there is a pad on the weighted base for AirPods. The integrated Apple Watch charger allows for Nightstand mode, but it is the weak link here, and I sometimes find that my Series 8 twists slightly. It doesn't shift enough to prevent charging, but it could be a problem, especially if you have an Ultra or favor a heavy band for your Apple Watch. If you fancy

this, make sure you get the correct version, because Otterbox also offers a cheaper 3-in-1 with a slot for Apple Watch charging around the back, which we don't recommend.

Best 3-in-1 Pad

Nomad Base One Max

PHOTOGRAPH: SIMON HILL

It's pricey, but this 3-in-1 charging pad from Nomad feels like you have to place it near a Steinway grand piano. If you want your iPhone out of sight and out of mind when you place it on a charger, a pad is the way to go—the MagSafe charger officially supports 15 watts to recharge your iPhone at the fastest speeds possible. The Apple Watch charging puck sticks up, so you can take advantage of Nightstand mode and see the

time. However, this is not a fast charger, so your smartwatch won't juice up as quickly. I tried it with a loop band and a normal strap, and I could fit the AirPods Pro in the spot behind the Apple Watch puck to recharge it just fine.

The metal chassis is heavy, and paired with the anti-slip rubber base, this thing stays put. It comes with a 2-meter USB-C to USB-C cable, which is great if you want to plug it into your new iPhone 16 to juice it up faster, but I wish it came with a 30-watt charging adapter. Nomad sells this one that we've tested and like. I do want to point out that since this is a pad, you can still charge non-MagSafe devices wirelessly on it, making it a nice option if you're on an older iPhone.

Best for Accessories

Spigen Arcfield 3-in-1 Wireless Charging Station

PHOTOGRAPH: JULIAN CHOKKATTU

My wife has been using a standard Spigen wireless charging stand for years, and it's been super reliable, so I'm quite happy the company now sells a 3-in-1 wireless charger. It's fairly compact—you can top up a wireless earbuds case underneath the iPhone's charging spot, and the Apple Watch charger is off to the right. It's easy to rotate the iPhone into Standby mode, and it hides the Apple Watch, in case you don't want two clocks staring at you. What makes this charger special is that it has an additional magnetic ring right behind the iPhone's charging dock, and this lets you store MagSafe accessories you may be

carrying around with your device, like a MagSafe wallet or tripod. (It will not charge MagSafe accessories.) That's super handy because too often I forget where my

MagSafe accessories are and don't end up using them. Now I have a place to store 'em.

Best Cheap 3-in-1 Wireless Charger

PHOTOGRAPH: SIMON HILL

ESR Qi2 3-in-1 Wireless Charging Station

By far the cheapest Qi2-certified 3-in-1 charger I've come across, I was surprised by how much I liked this ESR charger. The magnetic iPhone pad is secure and charges at 15 watts, the design is compact, and it comes with a charging brick and cable. The Apple Watch charger is a separate unit that slots into the back. That means you can take it with you (it simply needs a USB-A port to plug into), though I instantly lost the cap. This charger also works for StandBy

mode or watching video in landscape orientation.

Best for Travel

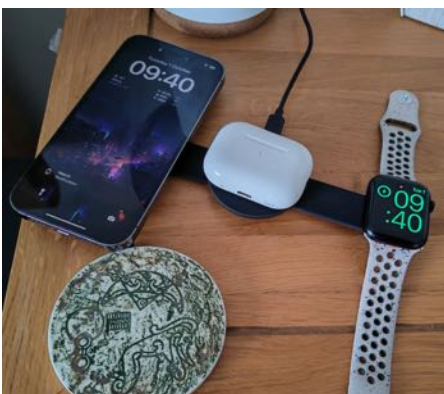

PHOTOGRAPH: SIMON HILL

Anker MagGo 3-in-1 Charging Station (Qi2)

Space is often limited when you travel, so the fact that Anker's MagGo 3-in-1 folds down to a very compact form is handy. Despite the small size, it packs plenty of power, charging your iPhone or Qi2-certified phone at up to 15 watts on a magnetic pad that can adjust to your preferred angle. A second pad behind the main pad charges AirPods or other wireless earbuds, and there is a fold-out Apple Watch charger.

Smallest Travel Option

PHOTOGRAPH: SIMON HILL

Anker MagGo UFO 3-in-1 Qi2 Charger

If you are really pressed for space, this is the smallest 3-in-1 charger you can get. It folds up neatly to resemble a macaron and is easy to stow, but this is not a power bank, and you do still need a cable and wall charger (both supplied). Unfolded, you get a magnetic pad to charge your iPhone at up to 15 watts (this is Qi2 certified), a middle pad for your AirPods, and an Apple Watch charger on the right. The design is lovely to handle and has a soft-touch finish with a durable silicone strap. I still prefer the

option above because it allows you to angle your iPhone and use StandBy mode, but the MagGo UFO allows you to travel as light as possible.

Another Compact 3-in-1 (That Folds!)

Satechi 3-in-1 Foldable Qi2 Wireless Charging Stand

PHOTOGRAPH: SIMON HILL

A classy mix of vegan leather and aluminum elevates this folding 3-in-1 charger. It is Qi2 certified, so it can deliver 15 watts to your iPhone, and there's a fold-out Apple Watch charger on the back to fast-charge Apple Watch 7 and above. It feels sturdy and secure, allows you to fix your preferred angle, and supports StandBy mode. It's relatively compact and looks good enough to be your permanent bedside charger. Not only does the whole thing fold flat, but it also comes with UK and EU adapters for the included power brick for your travels.

A Height-Adjustable 3-in-1 Wireless Charger

Mophie MagSafe 3-in-1 Extendable Wireless Charging Stand

PHOTOGRAPH:
JULIAN CHOKKATTU

Maybe you charge your iPhone at a standing desk. Or perhaps you want a more versatile charger. Enter Mophie's extendable wireless charging stand. The 15-watt iPhone charger sits atop a telescoping pole that can extend from 7.5 to 16 inches, and that means it doubles as a tripod of sorts—handy if you want to film a quick video or more comfortably take video calls. There's some flex in the charging pad too, so you can tilt it slightly up or down. You have to twist the pole slightly and then pull on it to extend, and while it's not the smoothest experience, it does the job and stays put.

Attached to the bottom section of the pole is the Apple Watch charger, which supports fast charging. You can pop a pair of wireless earbuds, AirPods or otherwise, on the charging cradle on the metal base. Mophie includes a proprietary charger but it's removable.

Best 2-in-1 Stand (AirPods)

Belkin BoostCharge Pro 2-in-1

PHOTOGRAPH: BELKIN

Don't have an Apple Watch? No problem. This elegant 2-in-1 stand can recharge your iPhone and AirPods (or other wireless earbuds with wireless charging support). It comes in black or white with a metal post that connects the weighted base to the MagSafe charger. It can fast-charge your iPhone and hold it in portrait or landscape orientation (great for StandBy). It is easy to grab my iPhone 14 Pro off this stand one-handed without tipping it over. There's a circular indent at the front for charging your AirPods. The included power adapter plugs into the base via a barrel port.

Best 2-in-1 Stand (Apple Watch)

Zens Nightstand Charger Pro 2

PHOTOGRAPH: SIMON HILL

With a weighty base, an adjustable Qi2/MagSafe charging pad, and a fold-out Apple Watch charger around the back, this Zens 2-in-1 is ideal for folks with an iPhone and Apple Watch. The Apple Watch pad folds out of the back, tucking your watch out of sight and allowing room for the strap to droop. The pad works great with StandBy mode. You can also fold the pad flat and charge AirPods or other phones if you need to, just not at the same time as your iPhone. Sadly, this has a

barrel port for the provided cable and charger (USB-C would be better), the Apple Watch charger can be a little stiff and tricky to fold out, and it's pricey, but I love the quality look and feel.

A 4-in-1 Stand

Zens 4-in-1 Modular Wireless Charger with iPad Charging Stand

PHOTOGRAPH: ZENS

If you own an iPhone, Apple Watch, and AirPods, there is a decent chance you might have an iPad too, so why not a 4-in-1 charging station? Zens offers a modular design, with a main stand for your iPad, a MagSafe pad in front to float your iPhone, and a slight indentation to charge AirPods below. The Apple Watch charger is a separate section that attaches magnetically (on either side) and holds your Watch in horizontal Nightstand mode, which looks slightly better than vertical. It feels durable with a grippy,

rubbery, flecked black finish made from recycled plastic.

You get a 65-watt power adapter, power cable, and adapter plugs for the US, UK, and EU, which is quite handy. The main drawback with this is the large size, and you have to connect a cable to the USB-C port on the side to charge your iPad.

Best Folding Charger

Woodie Milano Foldie

PHOTOGRAPH: SIMON HILL

Combining Nappa leather with aluminum and glass, this 3-in-1 charger folds neatly away and looks very stylish. The circular MagSafe iPhone charging pad goes up to 15 watts, and there's a central pad for AirPods or a second phone. You can charge your Apple Watch flat or pop the charger up for Nightstand mode. You can also fold it into a wedge shape to charge your iPhone in StandBy mode with your Apple Watch on the back.

You get a USB-C cable in the box, but you'll need your own wall charger.

For Older iPhones or Android

Anker MagGo Wireless Charging Station Pad

PHOTOGRAPH: SIMON HILL

Part of Anker's new Qi2-certified MagGo range, this versatile 3-in-1 wireless charging station has a 15-watt MagSafe pad, a 5-watt pad for AirPods in the middle, and a 5-watt Apple Watch charger. The iPhone pad can fold up and be angled, so you can have your iPhone lying flat or propped up in portrait or landscape orientation for StandBy mode. The Apple Watch puck can also pop up for Nightstand mode, or you can lay it flat. The cable and wall charger are included, but there's no carry pouch. While you can fold it flat, there are more

compact options for travel (see above). Top charging speeds are only for Qi2-certified phones or MagSafe iPhones, but I had no trouble charging an iPhone X and a Pixel 8 with it folded flat. This is a good pick if you have an older iPhone, or Android phones in the household you also want to charge.

A 3-in-1 for Fitbit Fans

Wasserstein 3-in-1 Charging Station

PHOTOGRAPH:
WASSERSTEIN

What if you have an iPhone and AirPods, but prefer a Fitbit to the Apple Watch? This 3-in-1 from Wasserstein has you covered. There are Lightning or USB-C plugs to slot your AirPods and iPhone onto plus a built-in charger for your Fitbit on a small extended platform. The iPhone and Fitbit are both angled for easy glancing (though you are stuck with a portrait view for the iPhone). I worry slightly about wear and tear on the ports here—be careful when sliding your devices on or off—but the advantage is that you get wired charging speeds. Just make sure you get the correct version. For the iPhone 15 or 16, you'll want the USB-C station.

A 3-in-1 Power Bank

OneAdaptr OneGo 3-in-1 Power Bank

PHOTOGRAPH: SIMON
HILL

This chunky 10,000-mAh-capacity MagSafe power bank also has a fold-out Apple Watch charger and a pad for AirPods. This is the first 3-in-1 MagSafe power bank I've tested. The pad doubles as a stable kickstand, and the USB-C port on the side can deliver up to 18 watts. It lacks official certification, so there's no fast charging for iPhones or Apple Watches. But you can fully charge your trinity of Apple gadgets with this power bank, and it delivered more than one and a half charges for my iPhone 14 Pro. The power button and five LEDs that show the battery level are less than ideally placed on the bottom edge. You get a lengthy USB-C to USB-C cable with an angled plug at one end and a small bag for taking it on your travels, and it could prove

handy when there's no power source nearby.

Honorable Mentions

We have tested several other multidevice wireless charging stations for Apple devices. Here are a few we liked:

PHOTOGRAPH: SIMON HILL

- UAG 3-in-1 Travel and Desktop Charger for \$170: This was close to earning a recommendation until I clocked the price. It's a very smart 3-in-1 charging kit that folds flat and comes in a snazzy zip-up bag with a 4-foot braided USB-C cable and 25-watt power adapter, including plugs for the US, UK, and Europe. You can prop your iPhone at different angles on the MagSafe stand,

and it works well with StandBy mode and Nightstand mode for your Apple Watch, but it's not Qi2 certified, so you won't get the stated 15-watt charging for an iPhone. Ultimately, it's just too damn expensive.

- Journey Glyde 4-in-1 Portable Charger for \$170: Likewise, reviews editor Adrienne So almost voted for this multidevice MagSafe power bank to get a separate recommendation until she clocked the price. It's a 10,000-mAh-capacity power bank that can charge up to four devices at a time and uses the Qi2 charging standard. However, our pick for this spot is so much cheaper and the Glyde does not have a kickstand.
- Scosche Baselynx 2.0 Modular Charging Station for \$100: What if three spots are not enough? Scosche has you covered with this modular charging station. The basic stand is a 2-in-1 for your iPhone and AirPods, but you can add an Apple Watch charger (\$70), a toast rack-style vertical station with USB-C ports (\$80), or even an AC outlet with USB-C port (\$50). The trouble is it gets quite big and expensive as you add modules, and I don't love the way it looks, but it's a neat idea.
- Belkin BoostCharge Pro 2-in-1 MagSafe-Compatible Wireless Charging Pad for \$80: Support for Qi2 offers magnetic alignment for your iPhone and charging at 15 watts, and there's a spot for AirPods on this compact double pad. A USB-C port allows you to charge something else, such as an Apple Watch, and you get a 5-foot USB-C cable and 30 W power supply in the box. There is also a 3-in-1 pad (\$110) that adds an Apple Watch charger on the right side.
- QDOS SnapStand 3-in-1 for £80: This clever design feels sturdy and comes flat, and you can fold out and angle a magnetic pad for charging your iPhone (StandBy mode works fine). There's a pop-out Apple Watch charger around the back, and the base has a pad for your AirPods. You get a black USB-C cable, but you'll need a charger (at least 25W). I like that it's partly made from recycled materials, and it folds away very neatly, but the charging speeds are relatively slow (7.5 watts for the iPhone and 2.5 watts for the Apple Watch).
- Kuxiu Foldable Magnetic Wireless Charging Station for \$88: With a very similar design to the QDOS above, but more functional-looking and squarer, this fold-out charger also has a magnetic pad for your iPhone (StandBy mode works), a fold-out Apple Watch charger in the middle, and a pad on the base for your AirPods. It comes with a USB-C cable and a 20-watt wall charger. The X40Q linked here is Qi2 certified, but the identical-looking X40Q is not.
- Belkin BoostCharge Pro 2-in-1 Wireless Charging Dock with MagSafe for \$120: This was our old 2-in-1 pick for iPhone and Apple Watch. I like the soft-touch finish, the pad on top can move through 70 degrees, and the shelf for your Apple Watch works with any strap. The braided USB-C cable is permanently attached, but you get a 30-watt wall charger in the box. I don't remember having issues when I first tested, but using it again, I found the weight of the camera end of my iPhone 14 Pro caused it to slowly droop when in StandBy mode. It's also kinda pricey.

- Anker 737 MagGo Charger for \$130: This MagSafe 3-in-1 is sturdy and holds my iPhone 14 Pro securely. Support for landscape makes it a nice way to take advantage of StandBy mode to turn your iPhone into a bedside clock, but it does block easy access to the Apple Watch. It can fast-charge at 15 watts and comes with a power adapter and cable. It can be hard to grab the AirPods out of there, especially if you have an AirPods protective case installed. I just shove a finger from the other direction and push it out. The other slight disappointment is that the Apple Watch charger doesn't support fast charging.
- Twelve South ButterFly 2-in-1 MagSafe Charger for \$130: This is an uber compact 2-in-1 charger that looks like a hockey puck. Open the Butterfly and you'll find two pads that are attached via a rubbery silicone material. You can fast-charge an Apple Watch on one— even pop the charger up to take advantage of Nightstand mode— and the other circle lets you recharge your MagSafe iPhone at 15 watts. It's a super compact solution, and Twelve South includes a 30-watt charger and cable with international plug adapters.
- Native Union Voyage 2-in-1 MagSafe Charger for \$100: For slightly cheaper price, reviews editor Adrienne So also likes Native Union's Qi2 butterfly solution, which doesn't come with plug adapters but does come in a tidy travel pouch and has a cable.
- Anker MagGo Wireless Charging Station Stand for \$100: This good-looking 3-in-1 charging tree is more affordable than our top pick, boasts Qi2 certification for 15-watt charging, and comes with a charger and cable. It just misses out on a place above because of the offset pad for the Apple Watch. It is slippery, so your Apple Watch may tilt, though I never had an issue with it not charging. Anker included stickers to combat this, but they are a fiddly and inelegant solution. It's also a shame that the main pad for your iPhone is fixed, so you can't adjust the angle. But these are minor gripes.
- Mophie 3-in-1 Travel Charger With MagSafe for \$75: This little travel kit comes with a felt carrying case, charging brick, and USB-C cable, and was our previous top travel pick. The square stack unfolds to reveal three wireless chargers in one elongated pad. The iPhone sticks magnetically to the center (15 watts), and the Apple Watch dock supports Nightstand mode (this 2023 model supports fast charging too). There's a grooved spot for the AirPods. It feels great, is compact, and is pretty lightweight all around.
- ESR HaloLock 3-in-1 Travel Wireless Charging Set for \$60: This is a decent travel kit at a reasonable price. You can prop your iPhone in portrait or landscape orientation, display your Apple Watch in Nightstand mode (if you turn it backward), and there is a pad for AirPods. It folds with the included cable and wall charger in a faux leather pouch. Sadly, it only charges iPhones at 7.5 watts.
- Anker 3-in-1 Cube with MagSafe for \$130: This dinky, dense, 2.5-inch cube from Anker was our previous compact pick. It has a MagSafe pad on top (15 watts), and the top section hinges to a 60-degree angle, revealing a charging surface for your AirPods. The wee pop-out shelf on the side has a built-in Apple Watch fast charger. You get a 5-foot cable and a 30-watt charger in the box.
- Satechi 3-in-1 Magnetic Wireless Charging Stand for \$80: This compact, attractive 3-in-1 is a little smaller than the Belkin, so it doesn't take up too much room, and folds down

compactly for travel. The aluminum build is attractive and sturdy (the iPhone mount is made of stainless steel). This is review editor Adrienne So's bedside table and it recharges her Apple Watch Ultra 2 from 70 percent to full in around 30 minutes.

- Case-Mate Fuel 3-in-1 Foldable for \$110: Finished in a classy gray material, this 3-in-1 charges an iPhone in a case or any Qi smartphone, and it's easy to fold flat and pack in a bag. It also has a built-in Apple Watch charger and a spot for AirPods. A cable and 45-watt charger are included. I also tested the solid Case-Mate Fuel 4-in-1 (\$150), which is quite good, but the unnecessary LEDs and Fuel logo put me off.
- iOttie Velox Duo for \$45: This was our 2-in-1 pick for a while. The black and gold combo looks great, the magnet is strong, and there's a weighted base. On the downside, it only charges iPhones at up to 7.5 watts. The permanently attached USB-C cable is a good length, but you do have to provide a wall adapter.
- Twelve South HiRise 3 Wireless Charging Stand for \$72: Our previous compact pick, this 3-in-1 is a space saver. There's an angled MagSafe perch for your iPhone, a shelf up top for your Apple Watch, and a spot for your AirPods underneath. It's a compact design that makes it easy to glance at your iPhone, though this means you can't utilize the Nightstand mode of your Apple Watch. It comes with a 5-foot USB-C cable, but you do need to provide your own power adapter (20 watts or above).
- RapidX Boosta 5-in-1 Charging Stand for \$50: This is a lot like Anker's MagGo 633. It's a charging stand designed to charge a MagSafe Boosta battery pack (sold separately), which you can stick a MagSafe iPhone onto. You can also charge AirPods on the base, and there's a spare USB-C port for something else, but I don't understand why they call it 5-in-1.

Avoid These

Not every charger will be a winner. Here are the ones we didn't like.

- Groov-e Asteria Wireless Charging Station with Alarm Clock for £25: There's a wee clock on the front of this charging station, which can accommodate an iPhone, earpods on a pad around back, and an Apple Watch up top. It feels and looks very cheap, slides around a little too easily, the magnet is weak, and the clock seems redundant when you can set your iPhone in StandBy mode. I also tried the Triton 3-in-1 folding pad (£15), and it was okay. They are very affordable, but you must provide your own power adapter.
- Zike 3-in-1 Z557C Stand for \$120: This 3-in-1 charger works perfectly well, but there are several better options above. The iPhone pad allows for StandBy mode but is not adjustable. The Apple Watch pad flips up or can be laid flat, and there's a spot for AirPods on the gray felt pad. It has a barrel port, so you must use the power adapter supplied, but what I really dislike about this charger is the ridiculously bright and utterly pointless white LED on the front that stays on the entire time.
- Alogic Matrix Ultimate for \$170: This 3-in-1 charger has a folding design, supports fast charging, includes a detachable 5,000-mAh power bank, and comes with a nice pouch,

but it is kinda bulky, and the white finish picks up dust and smudges very easily. I have also had issues with other Alogic batteries failing and not supplying the stated capacity.

- STM Goods ChargeTree Go for \$120: This charging tree station folds flat and can charge a trio of Apple gadgets. But there's no quick-charge support, my Apple Watch kept sliding out of place during the night, and there's no adapter included. It's not cheap either.

Simon Hill SENIOR WRITER AND REVIEWER

Simon Hill has been testing and writing about tech for more than 15 years. He is a senior writer for WIRED. You can find his previous work at Business Insider, Reviewed, TechRadar, Android Authority, USA Today, Digital Trends, and many other places. He loves all things tech, but especially smartphones, gaming, and smart home devices. Before writing, he worked in games development. He lives in Scotland.
