Apple today released watchOS 11.3.1, a minor update to the operating system that runs on the Apple Watch. watchOS 11.3.1 is compatible with the Apple Watch Series 6 and later, all Apple Watch Ultra models, and the [Apple Watch SE 2](#).

watchOS 11.3.1 can be downloaded by opening up the Apple Watch app and going to General > Software Update. To

install the new software, the Apple Watch needs to have at least 50 percent battery and it needs to be placed on a charger.

The watchOS 11.3.1 update includes important security updates, and it is recommended for all Apple Watch owners.

More of the features available in [watchOS 11 can be found in our watchOS 11 roundup](#).
