

MARCH 18 @ 3PM WELL DRILLER / GSA / EH MEETING

Meet your GSA representatives. Q/A Session.

Subsidence and declining water levels threaten our water supply. **Groundwater Sustainability Agencies** (GSAs) have been put in place to control the usage of our most precious resource. We must be sustainable by the year 2040 or the state will regulate our usage for us. We need to work together to protect our water supply for our communities. **This is your chance to ask questions of our GSA representatives and county staff.** Find out the information you need to know about how your client's usage will be impacted and what you can do to help expedite the processing of your well permit.

Our water basin
usage must be
sustainable by 2040

The GSAs are charged
with making that
happen

How will this effect
how you bid jobs?
What can you expect
in the future?

This is your chance to
learn and ask
questions!

You need to know
