

## **New Tech:** Entry & camera systems with temperature scanning & advanced facial recognition

Help your customers & employees feel safe with advanced security  
systems featuring **integrated temperature scanning** and **facial  
recognition technology** capable of detecting fevers & PPE.

# Protect your people & property from threats, **visible or not.**

Not all threats that enter your building are obvious.

## Security Gate

**Starting at \$4,000** | Digital & metal detector security gate with no-contact wrist scanner for temperature measurement & configurable high-temp alarm.

- Metal detector pinpoints location of metals & banned objects
- Scan count & alarms displayed on LCD in real time
- Non-contact temperature measurement (can sound alarm if high temperature is detected)
- 30°~45°C measurement range, high accuracy (precision to 0.1°, measurement deviation  $\leq 0.3^\circ$ )

## Stand-alone Kiosk/Access Control Unit

**Starting at \$2,500** | Face recognition access control terminal with digital detection module & no-contact wrist scanner for temperature measurement

- Face recognition accuracy >99% with 10000 face off-line capacity & whitelist option (detection range from 8" to 9.5', detection time ~0.2s)
- Face mask detection
- Non-contact wrist scanning temperature measurement (1-3cm)
- Door control options with video recording and two-way audio
- 7" Touch-capable screen

# Temperature Scanning Camera

Starting at \$15,000 | Bi-spectral infrared body temperature screening camera with blackbody temperature-controlled calibration unit

- Temperature-sensing camera with point, line, rectangle, and irregular area temp measurement modes
- Abnormal body temperature alarm function
- Blackbody calibration reference unit ensures accurate readings

# Handheld Temperature Scanner

CALL FOR PRICING | Handheld infrared temperature scanner

- Point temperature measurement, accuracy within 0.5°C
- Scan distance range of 6" to 3'
- Service time of 6+ hours with USB Type-C charging
- Center temperature measurement and high temperature tracking

Give yourself and everyone that enters your building some peace of mind by including temperature scanning into your facility's entry and security systems.

Note: while these devices are powerful and accurate, they should not be considered the sole point of detection for your safe entry policy and should be part of a multifaceted solution in accordance with Federal, State, and Local guidelines. Supplemental resources or devices may be recommended or required.

If your business or organization  
is concerned about safe entry into  
your facility, **CDS can help.**

CDS has been supporting businesses, organizations, and schools of all  
shapes and sizes for nearly **50 years**. We understand the challenges you're  
facing and we're **here to help** you succeed.
