

Wound Healing
Foundation
Funding Research for Tomorrow's Innovations

The Wound Healing Foundation was thrilled to support the Gordon Research Conference on Tissue Repair and Regeneration held June 1-6, 2025 at Colby-Sawyer College in New London, NH. Recipients of merit scholarship from the Wound Healing Foundation include:

Dr Robyn Allen
Post-Doctoral Research Fellow
University of Kentucky
Highly regenerative mammalian fibroblasts resist biomechanical cues to drive proliferation

Emily Davis
PhD Candidate
Boston University
FAK as a central mediator of provisional matrix assembly during stromal repair

Suneeti Madhavan
PhD Candidate
Case Western Reserve University
FASNated by fat: WNT signaling activation causes early decline of de-novo lipogenesis leading to lipid depleted dermal adipocytes

Omar Maged
PhD Candidate
Mount Desert Island Biological Laboratory (MDIBL)
Kidney Development and Regeneration in the Axolotl (Ambystoma Mexicanum)

Dr Mark Naven
Post-Doctoral Research Fellow
University of Bristol
Live Imaging the Wound Inflammatory Response and the Consequences of Disrupted Circadian Clocks on Collagen Deposition and Angiogenesis Post-Wounding

Congratulations to these young researchers on their scientific exploration of wound healing and regeneration!
