

Economics with Justice

SAVING NATURE- HOW ECONOMIC JUSTICE WILL RESTORE WILDLIFE

This is the title of the talk being given by Peter Smith
Founder and Director of the Wildlife Trust

on Saturday 19th October at 2.00pm

You are warmly invited to share his understanding
and passion for rewilding the country.

Peter will be examining the cultural and economic
issues surrounding this vital topic.

See more details below

ECONOMICS WITH JUSTICE LECTURE

SAVING NATURE

HOW ECONOMIC JUSTICE WILL RESTORE WILDLIFE

19 October 2019

2.00PM - 4.30PM SATURDAY

Peter Smith will talk about the history of wildlife's destruction and how moving taxation from incomes and trade onto land values permits the fundamental remedies that are required for us to value nature. He will show that the many benefits of rewilding and restoring the ecosystem and creating a just economy are essential for people's health, happiness and prosperity.

Peter Smith is the Founder and Director of the Wildlife Trust and has appeared on many radio and TV programs. His passion is the forensic examination of the economic and cultural issues surrounding rewilding.

In many ways' nature needs no wildlife charities, natural resource economists or government laws to thrive. It just takes people to stop abusing it and to have space to thrive on. The rewilding movement has shown Government policy and established environmental NGO's are achieving little in tackling nature's destruction or combating climate and ecological breakdowns. This fundamental truth has rocked nature conservation who are struggling to cope with this social movement where established NGO's and Government wish to be seen as having a monopoly on the protection of nature. Rewilding has enthused people that wildlife loss is not inevitable, and something can be done to bring wildlife and the natural systems all human life depends on back in profusion without spending a penny of taxpayer's money.

We can eliminate poverty, reduce population and protect our planet from climate catastrophe with some simple changes to how we raise taxation. The shifting our taxes on incomes and trade and putting them on Land Values and environmental externalities will make every person, business and government body value nature in every decision they make.

A change to our tax structure will allow a natural compensation system to happen automatically between the winners and losers when land is rewilded, based on understanding land values & taxation. Such solutions would protect nature and stimulate human progress, by getting to the very economic roots of the problem– we can see how simple economic steps, such as Land Value Tax & Green taxes, can efficiently and effectively internalise the costs and benefits of nature and create the Ecological Renaissance many people wish to see, allowing all to share the benefits of rewilding and all to flourish in prosperity for both people and wildlife.
